T less than 0.01 inch rain or melted snow. ††Not used in means and summaries Reference letters a,b,c, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Cornerstone, Altheimer, Route 1; Freeman Springs, Dover; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rosebud, Mt. Vernon, Route 2. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||||24 hour ending 7 a.m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations of 10 to 14 years the means are for the period to 1935, inclusive.

Daily Precipitation for February, 1936

/ol. XLI   Little Rock, Ark., March, 1936   No. 3

Price: 5 Cents per Copy; 50 Cents per year

GENERAL SUMMARY

March was a warm, dry month, this being the driest March ince 1925 and the fourth successive month with precipitation onsiderably below the average. Temperatures were below ormal for only 7 days during the month with cold periods occurring about the 6th, 13th, and 18th. Practically no frost lamage occurred during the month.

The average temperature for the State was 57.1° which is .5° above the 46-year mean. All stations had positive departures which ranged from 0.8° above normal at Carthage to 7.6° bove at Calico Rock.

Dust was observed on 12 or more days during the month but vas heaviest on the 24th, some stations reporting visibility of -4 to 1-2 mile.

The average precipitation for the 91 stations was 2.19 inches vhich is 2.55 inches below the 46-year mean, all stations except one having negative departures. Monthly totals ranged rom 0.05 inch at De Queen in the southwestern portion to .03 inches at England in the central. Rainfall was lightest n northwestern and north-central portions and in western border counties, while it was heaviest in the southeastern portion nd in counties bordering on the Mississippi River. The greatest 24-hour amount was 3.20 inches at England on the 24th.

The dry weather was favorable for preparation of land but he soil was too dry for growth in some western portions. A mall amount of cotton and much corn were planted.

Tornadoes, etc.

Sage, 23d, 11 p. m., from sw, path 300 feet wide, loss $1,500. Bodcaw nd vicinity, 24th, 3 a. m., from sw, path 150 feet wide, property damage 500. Pastoria to Ulm, 24th, 4:30 a. m., from sw, path 1-4 mile to 1 nile wide and 35 miles long, 4 persons slightly injured, $30,000 damage. lmyra and vicinity, 24th, 5 a. m., from sw, path 1 mile wide, loss 5.000. Windstorms:---Prescott, 23d, damage $600. Van Duzer and icinity, 24th, $4,000 damage to buildings. Lake Village, 26th, 5 p. m., 1,000 damage to buildings. Heavy Hail:---Newport, 16th, no damage eported. Brinkley, 23d, 9 p. m. and 24th 5 a. m., several hundred dollars lamage. Hailstones 1 inch in diameter on 23d. Moderate Hail:-Prescott 3d, 8:15 p. m., practically no damage. Stuttgart, 24th, no damage reported. Eureka Springs, 31st, 11:15 p. m., no damage. Rogers, 31st, o damage reported.

orrections: February, 1936.—Fayetteville, number of rainy days should be 0. Subtract 0.8 feet from the river gage readings at Georgetown up to and including he 26th.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters a,b,c, number of days missing. †Also on other dates. ‡‡P. O. dresses as follows:—Big Lake Outlet, Manilla; Cornerstone, Altheimer. Route 1; Freeman Springs, Dover; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; sebud, Mt. Vernon, Route 2. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||||24 hour ending 7 a.m. *Inded in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitan with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations of 10 to 14 years the means are for e period to 1935, inclusive.

Daily temperatures for March, 1936

VOL. XLI LITTLE ROCK, ARK., APRIL, 1936 No. 4

PRICE: 5 Cents per Copy; 50 Cents per year

GENERAL SUMMARY

This was the coolest and driest April since 1931 and the ifth consecutive month with precipitation below normal. Cold weather overspread the State on the 2d and 3d with freezing emperatures and killing frosts extending to the southern bor-ler. Temperatures were again considerably below normal from he 6th to the 10th and from the 21st to the 23d, some stations n the Ouachita Mountains reporting killing frost on the 23d.

The average temperature for the State, based on the reports f 60 stations, was 59.7° which is 1.8° below the mean for the ast 46 years, only three stations in the southern portion hav-ng positive departures. The highest temperature reported was 6° at Okay on the 13th and at Magnolia on the 14th; the owest, 17° at Gravette and Sunset on the 3d, which is one legree lower than the previous low temperature for April.

The average precipitation for the 93 stations reporting was .64 inches which is 2.20 inches below the mean for the past 6 years. Only two of the stations with records of 10 years or nore had positive departures. Monthly totals ranged from .60 inch at Magnolia to 6.17 inches at Mountain Home. The reatest amount measured in any 24-hour period was 2.66 nches at Mountain Home on the 5th. Snowflurries were re-orted in the northern portion of the State on the 2d but Ben-onville was the only station reporting a measurable amount.

Potatoes, truck, fruit, and strawberries were seriously dam-ged by the freezing temperatures of the 2d and 3d, peaches eing killed in large areas. Cotton and corn, where up, were lso damaged but only a small amount of cotton had been lanted. The weather was favorable for preparation of land or planting but in some sections of the western portion of the tate the soil was too dry for germination and good growth art of the month.

T.A.M.

Tornadoes, etc:

Beginning near Melbourne and ending near LaCrosse, 5th, 2 p.m., from sw, path -4 mile wide, one person killed, four injured. property damage $40,000. Heavy Hail, alico Rock, 5th, no report on damage. Moderate Hail, Booneville, Dutton and Rogers, th, no report of any damage. Little Rock and vicinity, 5th, slight damage. Hot prings, 6th, no report of damage.

Correction, page 14. Mean temperature at Hope should be 63.0°; departure −1.0°.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters a,b,c, number of days missing. †Also on other dates. ‡‡P. O. ddresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Altheimer, Route 1; Freeman Springs, Dover; Index, Route 5, Texarkana; utherville, Route 1, Lamar; Rosebud, Mt. Vernon, Route 2, Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖24hour ending 7 a.m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitaon with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations of 10 to 14 years the means are for he period to 1935, inclusive.

Daily temperatures for April, 1936

Vol. XLI LITTLE ROCK, ARK., MAY, 1936 No. 5

PRICE: 5 Cents per Copy; 50 Cents per year

GENERAL SUMMARY

Temperatures were generally above normal for the first decade, normal to slightly below the most of the second decade, and above normal thereafter until the 29th when cooler weather overspread the State. The average temperature, based on the reports of 54 stations, was 70.9° which is 1.8° above the mean for the past 46 years, only four stations with records of 10 years or more having negative departures. Monthly means ranged from 64.2° at Dutton to 73.6° at El Dorado. The highest temperature reported was 96° at Dumas on the 29th; the lowest, 35° at Thornburg on the 15th.

Showers occurred in all sections the first of the month and from the 9th to the 13th though amounts were small in some localities. After the middle of the month some sections had no rain and many localities only light showers. The average precipitation for the 88 stations reporting was 2.50 inches which is 2.52 inches below the 46-year mean. May is the sixth consecutive month with a negative precipitation departure. Of the stations with records of 10 year or more, only two in southwestern border counties had positive departures. Monthly totals ranged from 0.61 inch at Mammoth Spring to 7.48 inches at DeQueen. Six stations had monthly amounts of less than one inch, while 14 had 4.00 inches or more. The greatest amount measured in any 24-hour period was 4.00 inches at Springbank on the 10th.

The rains the first half of the month were very beneficial to crops but during the latter half the soil had become too dry for good growth in many sections. Cotton made good progress during most of the month and is unusually well cultivated but the soil was too dry in some sections for good growth the latter part of the month. Corn is clean and well cultivated but was needing rain badly in some sections at the close of the month.

Tornadoes, etc.

Horatio,(3 miles southeast of), 9th, 2 p.m., from sw, path 1-2 mile wide and 10 miles long, 2 killed, 20 injured, property damage $20,000. Ozan,(2 1-2 miles east of), 9th, from sw, 150 yards wide, none injured, property damage $500.

Windstorms:--Shannon and vicinity, 12th, several houses and barns destroyed, loss $5,000. Heavy Hail:--Blytheville, 10th, slight damage to corn. Eastern part of Randolph County and western portion of Clay County, 12th, severe hailstorm in connection with windstorm, path 1-2 mile to 3 miles wide, loss to crops $50,000. Moderate Hail:--Hot Springs, 2d, no report of any damage.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters a,b,c, number of days missing. †Also on other dates. ‡‡P. O.
ldresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Altheimer, Route 1; Freeman Springs, Dover; Index, Route 5, Texarkana;
utherville, Route 1, Lamar; Rosebud, Mt. Vernon, Route 2, Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight.
24hour ending 7 a.m. *Included in next measurement. Data in italics interpolated.
The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipita-
on with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations of 10 to 14 years the means are for
e period to 1935, inclusive.

Daily temperatures for May, 1936

GENERAL SUMMARY

Temperature was above normal and precipitation below dur- g June, this being the driest June since 1930 and the seventh nsecutive month with precipitation below normal. Rainfall the past six months has been only 43% of the normal a- ount and the deficiency for the State since January 1st is .79 inches.

The average temperature for the State, based on the reports 58 stations, was 80.0° which is 2.9° above the 46-year mean. stations with records of 10 years or more had positive de- rtures but in the western portion they were higher than in eastern. The highest temperature recorded was 113° at rning on the 20th which establishes a new high record for ne, the previous record being 110°. The lowest reported s 44° at Dutton on the 14th and at Thornburg on the 25th. Scattered showers occurred the first decade and on the 30th d more general showers on the 22d or 23, some stations re- rting an inch or more for these two days. The average pre- itation for the 94 stations reporting was 1.26 inches, which is 6 inches below the 46-year mean, all stations except one ving negative departures. Texarkana, Index, and White- fs in the extreme southwestern portion had only a trace of n during the month and 15 other stations less than one-half h. The greatest amount measured in any 24-hour period s 3.18 inches at Higden on the 7th.

The high temperatures and dry soil were unfavorable for ton in some sections. In the northeastern portion germina- n was slow in some localities and the crop got a late start but wth has been favorable in most instances with good cultiva- n, fields being unusually clean. It was too dry for early corn nearly all sections, some damaged beyond recovery. T.A.M.

Miscellaneous

indstorms:--Calico Rock, 10th, considerable damage to buildings and timber.
elena, 10th, $1,000 damage to buildings, signs, plate glass windows and trees.
nter Point, 22d, small damage to outhouses and timber.
maged by Lightning:--Little Rock, 22d, $5,700 damage to power lines and equip- t.
eavy Hail:--Helena, 3d, no damage reported; 6th, slight damage to crops
stern part of Craighead County, 7th, $50,000 damage to crops.
ack Rock, 10th, no damage reported.
oderate Hail:--Dardanelle, 8th, no damage reported.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ᵃ,ᵇ,ᶜ, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Altheimer, Route 1; Freeman Springs, Dover; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rosebud, Mt. Vernon, Route 2, Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖‖ 24hour ending 7 a.m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations of 10 to 14 years the means are for the period to 1935, inclusive.

Daily temperatures for June, 1936

Vol. XLI   Little Rock, Ark., July, 1936   No. 7

Price: 5 Cents per Copy; 50 Cents per year

GENERAL SUMMARY

Temperatures were nearly continuously above normal in the northwestern portion of the State during July, with a number of stations reporting the highest on record on the 18th. The average temperature for the State, based on the reports of 55 stations, was 83.3° which is 2.8° above the 46-year mean. The highest temperature recorded was 114° at Booneville and Gravette on the 18th; the lowest, 42° at Lead Hill on the 31st.

Rainfall was heavy to excessive in most eastern and southern portions the first of the month, but very light in the extreme northwestern portion. Showers occurred later in the month at most stations but were very light in the northwestern portion. The average precipitation for the State for the 93 stations reporting was 4.90 inches which is 1.10 inches above the 46-year mean. Monthly amounts ranged from 0.04 inch at Rogers to 14.16 inches at Pine Bluff. Rainfall was generally above normal in eastern and southern sections but seriously deficient in the northwest. The greatest amount measured in any 24-hour period was 7.34 inches at Cornerstone on the 2d.

The steady soaking rains the first of the month were very beneficial to all crops. Though amounts of 9.00 inches or more occurred at a few places in the eastern portion, little damage resulted. Early corn which had been badly damaged by the dry weather in June revived and improved rapidly. Cotton made excellent progress in most sections and was in good to excellent condition at the close of the month except in west-central sections and along the eastern slope of the Ozarks. Meadows, pastures, and truck crops were in excellent condition the last of the month except in the northwestern portion.

Tornadoes:---Bentonville (near), 15th, 3:30 p. m,, path narrow, barns and brooder houses wrecked, damage $2,000 Subiaco (near), 13th, 5:45 p. m., from w, path about 300 feet wide, $6,000 damage to buildings and $1,000 to crops.

Windstorms:---Arkansas City, 1st, $500 damage. Armorel, Barfield and vicinities, 13th, $500 damage. Cotton Plant and vicinity, 18th, $1,500 damage. Alicia and vicinity, 20th, $10,000 loss to crops and buildings. Wiseman, 20th, loss $800. Conway, 21st, several thousand dollars damage to buildings and contents.

Damage from heavy rain:---Little Rock, 21st, $50,000 damage.

Damage from lightning:-.Lock Rock and vicinity, 20th and 21st, building and power equipment damaged, loss $7,000. Mt. Pleasant, 20th, barn and garage with contents burned, loss $2,000.

Killed by lightning:---Near Mt. Vernon, 10th, one; near Van Buren, 14th, one: Marshall, 17th, one: El Paso, 20th, one.

Heavy Hail:---Jonesboro, (about 8 miles south of), 21st, hailstorm accompanied by high wind, loss $20,000. On Highway No. 10, Perry-Pulaski County line, $10,000 damage to crops, fruit trees and buildings.

· less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O.
esses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Altheimer, Route 1; Freeman Springs, Dover; Index, Route 5, Texarkana;
erville, Route 1, Lamar; Rosebud, Mt. Vernon, Route 2, Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight.
hour ending 7 a.m. *Included in next measurement. Data in italics interpolated.

e departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipita-
with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations of 10 to 14 years the means are for
eriod to 1935, inclusive.

Daily temperatures for July, 1936

PRICE: 5 Cents per Copy; 50 Cents per year

GENERAL SUMMARY

This was the hottest and driest August since state-wide rec- ds have been kept but, again as in July, temperatures were uch higher in western and central portions than in the east- n. Maximum temperatures were 100° or higher in the west- portion for from 20 to 26 days, while along the Mississippi ver the number was as low as 5 days. The average tempera- re for the State, based on the records of 57 stations, was .0° which is 5.0° above the 46-year mean. The highest nperature reported was 120° at Ozark on the 10th which is higher than the previous record for the State, while the vest temperature was 43° at Dutton and Thornburg on the . The greatest daily range was 54° at Gilbert on the 10th. Scattered showers occurred during the month but some sec- ns received no rain. A number of stations had only one ny day. The average precipitation for the 95 stations re- rting was 0.44 inch which is 3.14 inches below the 46-year ean. Monthly amounts ranged from none at 8 stations to 37 inches at Springbank. Only one other station had as ich as 2.00 inches, while 5 others had 1.00 inch or more. e greatest amount measured in any 24-hour period was 1.80 ches at Pocahontas on the 8th.

Crop conditions ranged from good to excellent the first of month in most sections of the State except the northwest- portion but the high temperatures and very little rainfall used rapid deterioration. Early corn was about mature be- e the soil became so dry and the temperatures so high but e plantings were almost a total loss in all sections. Cotton ed better than corn, especially in the eastern portion, where nperatures were not so high as farther west. However, the t winds and high temperatures of the 9th and 10th caused pid deterioration. Picking and ginning are farther advanced an usual. Meadows, pastures and all truck crops were either stroyed or seriously damaged, while rice was about the only op in the State that didn't suffer. Stock water was becoming arce by the close of the month. The soil is too dry in all ctions for the planting of fall crops.

T.A.M.

amaged by Lightning:--Eureka Springs, 17th, barn destroyed, loss $1,000.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Altheimer. Route 1; Freeman Springs, Dover; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rosebud, Mt. Vernon, Route 2, Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. |||| 24hour ending 7 a.m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations of 10 to 14 years the means are for the period to 1935, inclusive.

Daily temperatures for August, 1936

GENERAL SUMMARY

Temperature and precipitation were both above normal,
is being the warmest September since 1925. High tempera-
res prevailed in the western portion until the middle of the
onth but they were not near so high in the eastern portion.
e average temperature for the State, based on the reports of
stations, was 78.9° which is 4.5° above the 46-year mean,
stations having positive departures. Monthly means ranged
m 73.5° at Dutton to 82.9° at Texarkana. The highest
nperature reported was 109° at Highland and Hot Springs
the 5th; the lowest, 38° at Dutton on the 30th.

Moderate to heavy rains occurred in much of the northern
lf of the State the first of the month and about the 10th but
nfall was light and scattered in central and southern sec-
ns. Heavy showers began about the 16th in the northern
rtion and became more general from the 20th to the 28th,
st sections of the State except the southeastern and some
thwestern localities receiving good rains during this period.
e average precipitation for the State for the 93 stations re-
rting was 4.75 inches which is 1.35 inches above the 46-year
an. Monthly amounts ranged from 0.27 inch at Yancopin
13.52 inches at Freeman Springs. The greatest 24-hour
ount measured was 4.33 inches at De Queen on the 27th.

The rainfall and warm weather were very favorable for the
velopment of green bolls in the heavy cotton producing sec-
ns but the plants were too near dead elsewhere for much im-
ovement. Picking and ginning were delayed somewhat in
northern portion by the continued rainy weather the latter
t of the month but in many southern and western localities
king was almost completed by the close of the month. The
ather was favorable for gathering corn and feed crops except
the northern portion where rainfall was heaviest and most
quent. The soil was in good condition in the northern half
the State most of the month for the growth of fall crops but
dry in east-central and southern sections. T.A.M.

VINDSTORM:---Grannis (3 miles southeast of), 9th, $200 damage.
Killed by Lightning:---Near Stuttgart, 8th, one.

orrection, July:--Bentonville, lowest barometer should be 29.75 on 19th.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Altheimer, Route 1; Freeman Springs, Dover; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rosebud, Mt. Vernon, Route 2, Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖‖ 24hour ending 7 a.m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations of 10 to 14 years the means are for the period to 1935, inclusive.

Daily temperatures for September, 1936

VOL. XLI LITTLE ROCK, ARK., OCTOBER, 1936 No. 10

PRICE: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Mild weather prevailed the first 21 days of October with the highest temperatures for the month reported at most stations on the 5th or 19th, while temperatures were considerably below normal from the 22d to the 29th, several stations in the northern portion of the State and a few in the Ouachita Mountains reporting killing frosts and freezing temperatures during this period. The average temperature for the State, based on the reports of 60 stations, was 61.1° which is 1.5° below the 46-year mean, all stations except two having negative departures. The highest temperature reported was 93° at Crossett on the 5th; the lowest, 24° at Eureka Springs on the 27th. The greatest daily range was 49° at Mount Ida on the 18th.

Rainfall was heavy in most sections of the State from the 7th to the 9th and also from the 22d to the 26th, while showers fell at a few stations about the middle of the month and on the 31st. The average precipitation for the State for the 94 stations reporting was 5.00 inches which is 1.83 inches above the 46-year mean. Only three stations for which normals have been computed had negative departures. Monthly amounts ranged from 2.98 inches at Rogers to 8.65 inches at Lutherville. The greatest amount measured in any 24-hour period was 3.93 inches at Lutherville on the 25th.

Except for the period from the 7th to the 10th, the picking of cotton and the gathering of other crops progressed rapidly until the 21st, but thereafter very little was accomplished due to the continued damp, rainy weather. Cotton picking was much farther advanced than usual at the opening of the month and was about completed in many localities before the rains began on the 21st. However, in the eastern lowlands a considerable amount remained in the fields at the close of the month. The harvesting of rice was also delayed by the heavy rainfall but by the end of the month threshing was about completed in the southern portion and was well along in the northern. The soil was too wet in the northern portion for fall plowing the last of the month but generally in good condition elsewhere. The weather was very favorable for the growth of pastures, late fall and truck crops. There was little damage the latter part of the month from frost and freezing temperatures.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ᵃ,ᵇ,ᶜ, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Freeman Springs, Dover; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rosebud, Route 2, Mt. Vernon; Springbank, Dodridge. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||| 24 hours ending 7 a.m. *Included in next measurement. Data initalics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Daily temperatures for October, 1936

VOL. XLI LITTLE ROCK, ARK., NOVEMBER, 1936 No. 11

PRICE: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Temperatures were considerably below normal from the 3d to the 11th and from the 23d to the 27th, with the coldest weather of the month occurring in nearly all sections on the 27th. The first freeze of the season occurred on the 3d or 4th but very little damage resulted as most crops were mature. The average temperature for the State, based on the records of 59 stations, was 48.5° which is 2.9° below the 46-year mean, all stations except one having negative departures. The highest temperature reported was 87° at Crossett, Dumas, and Magnolia on the 2d; the lowest, 12° at Gilbert on the 27th.

Rainfall was heavy in most sections of the State the first of the month and at several stations on the 30th. Light to moderate rain occurred in central and southern sections on the 23d or 24th but very little or none in northern counties. The average precipitation for the 95 stations reporting was 3.00 inches which is 0.69 inch below the 46-year mean. Monthly amounts ranged from 0.10 inch at Gilbert in the Ozarks to 6.41 inches at Crossett in a southeastern border county. The greatest amount measured in any 24-hour period was 3.58 inches at Searcy on the 3d. Snow occurred in the northern half of the State on the 3d and in the extreme northeastern portion on the on the 26th but only 13 of the 95 stations reported a measurable amount during the month. The greatest monthly total was 4.0 inches at St. Francis.

The first ten days of the month were generally either too wet or too cold for farm work but thereafter until about the 24th the weather was favorable. Most of the cotton which remained in the fields at the opening of the month was picked before the freezing weather the latter part. Nearly all corn has been gathered and the threshing of rice has been completed. Wheat, oats, rye, winter pastures, and winter grasses were sown during the month and all are in good to excellent condition. Considerable fall plowing has been done and orchards have been pruned and prepared for winter spraying. T.A.M.

Corrections, October, 1936.--Jonesboro, maximum temperature on 19th should be 84°, on 20th, 70°, on 31st, 71°. Mean maximum 71.8°, mean temperature 60.6°, departure from normal −2.0°.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ᵃ,ᵇ,ᶜ, number of days missing. †Also on other dates. ‡‡P. O. ldresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Freeman Springs, Dover; Index, Route 5, Texarkana; utherville, Route 1, Lamar; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge. Precipitation for 24 hours ending near sunset unless otherwise indicated. *24 hours ending midnight. ||| 24 hours ending 7 a.m. *Included in next measurement. Data initalics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitaon with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for e period to 1935, inclusive.

Daily temperatures for November, 1936

OL. XLI Little Rock, Ark., December, 1936 No. 12

Price: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Temperatures were generally somewhat below normal the
rst half of December while they were nearly continuously a-
ove the latter half, with departures as high as 22° above nor-
al in the western portion on the 27th. The average temper-
ure for the State, based on the reports of 58 stations, was
.5° which is 2.8° above the 46-year mean, all stations ex-
pt one having positive departures. The highest temperature
ported was 78° at Magnolia on the 30th; the lowest, 13° at
ilbert on the 12th. The greatest daily range was 52° at Gil-
rt on the 15th.

Precipitation occurred during the first seven days of the
onth and from the 27th to the 31st but except for light a-
ounts on the 10th, 18th, and 19th very little fell on other
tes. Light snow occurred at a number of stations either the
th or 19th but only 7 stations had measurable amounts. The
eatest depth reported was 1.5 inches at Big Lake Outlet on
e 19th. The average precipitation for the State for the 95
ations reporting was 5.32 inches which is 1.04 inches above
e 46-year mean. Monthly totals ranged from 2.14 inches at
ad Hill to 9.31 inches at Yancopin. The greatest amount
easured in any 24-hour period was 5.70 inches at Springbank
the 6th. The average number of days with 0.01 inch or
ore was 9.

The weather was unfavorable for outdoor activities the first
ven days of the month and during the latter part, very favor-
le the remainder of the time. Wheat, oats, rye, winter grass-
, and winter truck made good growth because of the unusual-
mild weather, particularly during the latter half of the
onth. Stock were still on the range even at the close of the
onth and were in good condition. Not much plowing was
ne even in upland sections, the soil being too wet most of
e time. The heavy rains of the 5th and 6th caused rapid
es in the Petit Jean, Ouachita, and Little Red rivers but
od stage was reached only on the Petit Jean. T. A. M.

Damaged by Lightning:—Mountain View, 30th, $500 dam-
e to court house wiring and ceilings.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters [a],[b],[c], number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Freeman Springs, Dover; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge. Precipitation for 24 hours ending near sunset unless otherwise indicated ***24 hours ending midnight. ‖‖ 24 hours ending 7 a.m. *Included in next measurement. Data initalics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Daily temperatures for December, 1936

Vol. XLI	Little Rock, Ark., year, 1936	No. 13

Price: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

The four outstanding features of the weather in Arkansas during the year 1936 were: the unusually long cold spell in January and February, the late freeze in April, the pronounced deficiency in precipitation the first six months of the year and in August, and the long hot summer, especially in central and western portions of the State.

January and February were cold, the latter part of January and the first three weeks of February being one of the longest periods of cold weather ever experienced in the State. Rivers were frozen in the northern portion for the first time in many years. The Arkansas River at Little Rock was practically frozen over on February 9th and partially frozen on the 20th. March was a warm dry month, being the driest since 1925 and the fourth successive month with precipitation considerably below normal. April was also dry but cold, freezing temperatures and killing frosts extending to the southern border on the 3d. In May temperature was somewhat above normal while precipitation was about 50% of the normal amount. June also was dry, this being the driest June since 1930, while temperatures were unseasonably high the latter half, new records for this month being established at some stations on the 20th. The drought was broken in most sections of the State except the northwestern portion in July, but temperatures were unusually high, with some stations reporting the highest on record on the 18th. The high temperatures continued in August, this being the hottest and driest August since State-wide records have been kept, especially in the western portion. Ozark with 120° on the 10th exceeded the previous record for the State by 4°. Temperature and precipitation were both above normal in September, the drought being broken in the northwestern portion of the State for the first time this year. Some stations in that sections received more rain this month than they had had in the preceding eight months. Mild weather prevailed most of October and November, with killing frosts occurring at some stations in the northern portion of the State the latter part of October and in all sections the first week in November. Temperature and precipitation were both above normal in December, with unusually mild weather prevailing the latter half of the month.

The mean temperature for the State was 62.0° which is 0.6° above the 46-year average. Annual means ranged from 56.8° at Dutton to 66.0° at El Dorado. Of the stations for which normals have been computed, 11 had negative departures, 39 positive, and 3 were normal. Extremes ranged from 15° below zero at Lead Hill on February 18th to 120° at Ozark on August 10th.

The average precipitation for the State was 34.75 inches which is 13.31 inches below the 46-year mean and the lowest State average on record. Annual amounts ranged from 19.11 inches at Index in a southwestern border county to 47.88 inches at St. Francis in the extreme northeastern portion. All stations with records of 10 years or more had negative departures. Precipitation was above normal in July, September, October, and December, below in the other months with the least rainfall of the year occurring in August. A number of stations received less than 50% of the normal amount of rain for the year, while the percentage for the State as a whole was slightly more than 72%.

The shortage of rainfall during the year was felt even in the early spring months. In February in the northwestern portion of the State water in wells was low and with but little rainfall thereafter until September wells and springs failed which had never been known to go dry before. Showers during the spring months generally provided enough soil moisture for germination of seeds but in some sections cotton got a late start because of the dryness of the soil. However, with good cultivation most crops made good progress until the latter part of May and the 1st of June when temperatures were much higher. In June early corn began to need rain badly and before the close of the month some of it was damaged beyond recovery, but with the heavy soaking rains the first of July it revived and improved rapidly except in the northwestern portion where rainfall was insufficient. All crops grew rapidly in eastern and southern sections during July though temperatures were unusually high part of the time, but by the first of August rain was again needed badly in nearly all sections of the State, and with high temperatures and the hot winds of the 9th and 10th, all crops deteriorated rapidly. In the eastern half of the State temperatures were high for only a few days and the damage done to cotton was offset by the good growing weather later in the fall but late corn was practically ruined in all sections. The rains in September came too late in the western portion to be of much benefit to most crops, the plants being too near dead to be revived. Corn was almost a total failure in the northwestern portion and though cotton fared better than corn the crop was very short in the western half of the State. In the eastern portion, however, the yield was the best in many years because of the favorable weather for the development of green bolls in the fall.

The last killing frost in spring occurred in central and southern sections on April 3d and in the northern portion about April 7th, but at a few stations in the Ozarks and the Ouachita Mountains it was as late as April 23d. The first killing frost in autumn occurred at a few stations in the northern portion October 27th or 29th and elsewhere about November 3d or 4th. The growing season ranged from 189 days at Dutton in the Ozarks to 216 days at a number of stations. The late freeze in April killed peaches in large areas and seriously damaged potatoes, truck, apples, and strawberries. Cotton and corn, where up, were also damaged but only a small amount of cotton had been planted.

Nine tornadoes were reported during the year: four in March, one in April, and two each in May and July. Losses were smaller than in 1935 but greater than in 1934. During the year three people were killed, 28 injured, and property valued at $106,500 destroyed.

Damage from windstorms was confined chiefly to March, May, June, July, and September with heaviest losses occurring in July. Damage from hail was reported in March, May, June, and July. Losses in May were confined principally to eastern Randolph and western Clay counties and in June to eastern Craighead County, damage in each instance being $50,000. The total loss from hail during the year was $130,500 and from windstorms $28,100.

T.A.M.

WEATHER BY MONTHS

January:—This was the coldest January since 1930 and the driest since 1911, which was the driest on record. Temperatures were considerably lower in central and eastern portions, with a number of days with the maximum below freezing. Precipitation was 3.17 inches below normal, with monthly totals ranging from 0.13 inch at Fayetteville to 4.59 inches at Crossett. The average snowfall was 3.5 inches which is the highest State average since 1930. Streams remained at low stages during the month and some were frozen in the northern portion during the latter part. Wheat, oats, meadows, and winter truck were badly frozen in many localities.

February:—Unusually cold weather prevailed during the month with cold waves on the 4th, 9th, and 18th. Precipitation was 1.59 inches below normal, with 5 stations having monthly amounts of less than an inch. Monthly totals ranged from 0.77 inch at Index to 3.73 inches at St. Francis. Rain is needed in the northwestern portion, water in wells being low and all streams at low stages. Precipitation has been below normal for the last three months, this being the driest winter on record. The weather was decidedly unfavorable for outdoor activities until the 22d but thereafter very favorable. Wheat, oats, and winter truck were damaged by freezing where not protected by snow cover. Some gardens and potatoes were planted the last of the month in the southern portion.

March:—Precipitation was 2.55 inches below the 46-year mean, all stations except one having negative departures. Monthly totals ranged from 0.05 inch at De Queen to 6.03 inches at England. Rainfall was lightest in northwestern and north-central portions and in western border counties, while it was heaviest in the southeastern portion and in counties bordering on the Mississippi River. Tornadoes occurred on the 23d and 24th in which 4 persons were slightly injured and property damaged valued at $37,000. Temperatures were below normal for only 7 days during the month, all stations having positive departures. Dust was observed on 12 or more days, with some stations reporting visibility of 1-4 to 1-2 mile on the 24th. The dry weather was favorable for preparation of land but the soil was too dry for growth in some western portions. A small amount of cotton and much corn were planted.

April:—This was the coolest and driest April since 1931, Gravette and Sunset reporting the lowest temperature ever recorded for the month on the 3d. Temperatures were again considerably below normal from the 6th to the 10th and from the 21st to the 23d, some stations in the Ouachita Mountains reporting killing frosts on the 23d. Precipitation was 2.20 inches below normal, only two stations having positive departures. Monthly totals ranged from 0.60 inch at Magnolia to 6.17 inches at Mountain Home. The weather was favorable for planting crops but in some sections of the western portion the soil was too dry for germination and good growth part of the month. A tornado occurred near Melbourne on the 5th in which one person was killed, 4 injured, and property valued at $40,000 destroyed.

May:—Showers occurred in all sections the first of the month and from the 9th to the 13th though amounts were small in some localities. After the middle of the month some sections had no rain and many localities only light showers. The average precipitation was 2.50 inches which is 2.52 inches below normal, this being the sixth consecutive month with a negative precipitation departure. Monthly totals ranged from 0.61 inch at Mammoth Spring to 7.48 inches at De Queen. Tornadoes occurred on the 9th in the southwestern portion in which 2 people were killed, 20 injured, and property valued at $20,500 destroyed. Cotton made good progress during most of the month and was unusually well cultivated but the soil was too dry in some sections for good growth the latter part. Corn was clean and well cultivated but was needing rain badly in some sections by the close of the month.

June:—This was the driest June since 1930 and the seventh consecutive month with precipitation below the average. Rainfall for the past six months has been only 43% of the normal amount and the deficiency for the State since January 1st is 14.79 inches. All stations except one had negative departures, with monthly totals ranging from a trace at Texarkana, Index, and Whitecliffs to 4.02 inches at Higden. Temperatures were unusually high but were higher in the western portion than in the eastern. The highest temperature reported was 113° at Corning on the 20th which is 3° higher than the previous record for June. The high temperatures and dry soil were unfavorable for cotton in some sections and decidedly unfavorable for corn in nearly all sections, some being damaged beyond recovery.

July:—Temperatures were nearly continuously above normal in the northwestern portion of the State during July, a number of stations reporting the highest on record on the 18th. Rainfall was heavy to excessive in most eastern and southern portions the first of the month, but very light in the extreme northwestern portion. The average precipitation was 4.90 inches which is 1.10 inches above normal, this being the first month this year with a positive departure. Monthly totals ranged from 0.04 inch at Rogers to 14.16 inches at Pine Bluff. Rainfall was generally above normal in eastern and southern sections but seriously deficient in the northwestern portion. Crop conditions improved materially during the month except in the northwestern portion where crops continued to deteriorate. Damage during the month was as follows: from tornadoes, $9,000; windstorms, $16,300; heavy rain, $50,000; heavy hail, $30,000.

August:—Maximum temperatures were 100° or higher in the western portion of the State for 20 to 26 days but were not so high in the eastern. Scattered showers occurred during the month but some sections received no rain. A number of stations had only one rainy day. The average rainfall for the State was only 0.44 inch which is the least on record for August. Eight stations had no rain, while the greatest monthly total was only 2.37 inches. All crops deteriorated during the month. Late corn was almost a total loss in all sections and meadows, pastures and all truck crops were either destroyed or seriously damaged. Rice was about the only crop in the State that didn't suffer. Stock water was becoming scarce by the close of the month and the soil was too dry in all sections for the planting of fall crops.

September:—This was the warmest September since 1925. High temperatures prevailed in the western portion until the middle of the month but they were not near so high in the eastern. Moderate to heavy rains occurred in much of the northern half of the State the first of the month and about the 10th but rainfall was light and scattered in central and southern sections. Heavy showers began about the 16th in the northern portion and became more general from the 20th to the 28th, most sections of the State except the southeastern and some southwestern localities receiving good rains during this period. Monthly amounts ranged from 0.27 inch at Yancopin to 13.52 inches at Freeman Springs. The soil was in good condition in the northern half of the State most of the month for growth of fall crops but too dry in east-central and southern sections. The picking and ginning of cotton were delayed somewhat in the northern portion by the continued rainy weather the latter part of the month but in many southern and western localities picking was almost completed by the close of the month.

October:—Temperatures were considerably below normal from the 22d to the 29th, several stations in the northern portion and a few in the Ouachita Mountains reporting killing frost and freezing temperatures during this period. Precipitation was 1.83 inches above normal, with monthly amounts ranging

Departures from normal temperature are computed from averages of entire period for stations having 10 or more years record. Departures of precipitation with 15 years or more record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive. T., less than 0.01 inch rain or melted snow. Reference letters [a], [b], [c], appearing in the table indicate number of days missing: † Also on later dates. ‡‡Post-office addresses of these stations as follows:-Big Lake Outlet, Manilla, Ark.; Freeman Springs, Dover, Ark.; Index, Route 5, Texarkana, Ark.; Lutherville, R. F. D. No. 1, Lamar, Ark.; Rosebud, Route 2, Mount Vernon: Springbank, Doddridge, Ark.

Monthly and Annual Mean Temperatures for the Year 1936, with Departures from the Normal

Continued from page 50

from 2.98 inches at Rogers to 8.65 inches at Lutherville. Except for the period from the 7th to the 10th, the picking of cotton and the gathering of other crops progressed rapidly until the 21st, but thereafter very little was accomplished due to the continued damp, rainy weather. Cotton picking was much farther advanced than usual at the opening of the month and was about completed in many localities before the rains began on the 21st. However, in the eastern lowlands a considerable amount remained in the fields at the close of the month. The soil was too wet in the northern portion for fall plowing the last of the month but generally in good condition elsewhere. There was little damage from frost and freezing temperatures.

November:—The first freeze of the season occurred on the 3d or 4th but little damage resulted as most crops were mature. Precipitation was 0.69 inch below the average, with monthly amounts ranging from 0.10 inch at Gilbert to 6.41 inches at Crossett. The first ten days of the month were generally either too wet or too cold for farm work but thereafter until about the 24th the weather was favorable. Most of the cotton which remained in the fields at the opening of the month was picked before the freezing weather the latter part. Nearly all corn has been gathered and the threshing of rice has been completed. Wheat, oats, rye, and winter pastures were sown during the month and all are in good to excellent condition. Considerable fall plowing has been done and orchards have been pruned and prepared for winter spraying.

December:—Temperatures were generally somewhat below normal the first half of December, nearly continuously above the latter half. The weather was favorable for out-door activities the first seven days of the month and during the latter part, very favorable the remainder of the time. Wheat, oats, rye, and winter truck made good growth because of the unusually mild weather, particularly during the latter half of the month. Stock was still on the range even at the close of the month and in good condition. Not much plowing was done even in upland sections, the soil being too wet most of the time. The heavy rains of the 5th and 6th caused rapid rises in the Petit Jean, Ouachita, and Little Red rivers but flood stage was reached only on the Petit Jean.

Corrections: 1936

The following precipitation departures should be inserted in respective months: Arkansas City, January −1.05; Dardanelle, October +2.54; England, October +2.44; Ft. Smith, February −1.77; Index, January −2.85; February −2.04; Lead Hill, January −2.45. Total precipitation Dutton, January, should be 0.68 inch; Pine Ridge, March 4.14 inches.

Price: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

This was the wettest January on record, being considerably wetter than the correspondingly wet months of 1916, 1930 and 1932. Rainfall was heavy in southeastern, east-central, and some southwestern sections on the 1st or 2d and nearly continuous from the 5th to the 25th. The average precipitation for the State for the 95 stations reporting was 12.61 inches which is 8.22 inches above the 47-year mean. Monthly totals ranged from 4.41 inches at Ft. Smith to 21.26 inches at Big Lake Outlet. The northwestern portion of the State received from 7.00 inches to 8.00 inches rainfall, while stations in the St. Francis River basin had from 15.00 inches to 20.00 inches. The greatest amount measured in any 24-hour period was 4.83 inches at Searcy on the 21st. The average number of days with 0.01 inch or more was 17, with a number of stations reporting more than 20 days, while the State average for any preceding wet January was 12.

Freezing rain and sleet occurred in the northwestern portion on the 8th and 9th. Ice covered the ground, timber and shrubbery were severely damaged, power and communication lines broken. The damage to telephone, telegraph, and power lines was estimated at $100,000. This was probably the worst ice storm in the history of the northwestern portion of the State.

From the 22d to the 24th freezing rain in connection with sleet was exceptionally heavy in the northern portion. The ground was coated with ice as deep as 4.0 inches in some sections. Glaze was unusually heavy in central and northern sections and was as thick as 1 1-4 inches on timber in Perry and some adjoining counties. Growing timber, shadetrees, and shrubbery were severely damaged. Telephone, telegraph, and power lines were broken and some sections were without lights and communication service for two or three days. Damage was more than $906,000 during this period.

The excessive rain from the 20th to the 25th caused rapid rises in the White, Ouachita, and St. Francis rivers. The Ouachita River at Camden reached a stage of 41.5 feet which is 0.5 foot higher than that of 1927. On the lower White River stages were considerably lower than the 1927 flood while on the St. Francis and its tributaries a serious flood was in progress at the close of the month with crest stages in February the highest ever recorded. Thousands of people were forced to leave their homes in the eastern part of the State. Refugee camps were established on Crowley's Ridge and in towns along the Mississippi River. Livestock and household goods were moved in most instances but losses were heavy as many had to be rescued in boats to escape the rapidly rising water. The National Guard and some regular Army units were called out to supervise the assembling of the refugees and the distribution of food and clothing in the camps. Losses from flood in all sections of the State will appear in the February issue.

Temperature averaged above normal in central and eastern sections but were generally somewhat below in the northwestern portion. The coldest weather occurred either about the 3d or 23d with 9° reported at Eureka Springs and Gravette on the 22d and at Lead Hill on the 27th, while temperatures were as high as 80° at Portland in a southeastern border county on the 8th. The average temperature for the State, based on the records of 61 stations, was 41.8° which is 0.5° above the 47-year mean. Of the stations for which normals have been computed, 26 had negative departures and 26 positive. Monthly means ranged from 32.4° at Gravette to 51.0° at Crossett and Portland. The greatest daily range was 46° at Eureka Springs and Fayetteville on the 8th.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ᵃ,ᵇ,ᶜ, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Freeman Springs, Dover; Index, Route 5, Texarkana: Lutherville, Route 1, Lamar; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge. Precipitation for 24 hours ending near sunset unless otherwise indicated ***24 hours ending midnight. |||| 24 hours ending 7 a.m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLII Little Rock, Ark., February, 1937 No. 2

Price: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Temperatures averaged somewhat above normal while precipitation was considerably below but February 1937 was not as dry as February 1936. Temperatures were highest either the 7th or 8th while they were considerably below normal on the 2d, 10th, and the last week of the month. The mean temperature for the State, based on the records of 61 stations, was 44.2° which is 0.7° above the 47-year average. Monthly means ranged from 36.0° at Gravette in the extreme northwestern portion to 51.8° at Magnolia in a southern border county. The highest temperature reported was 84° at El Dorado on the 8th; the lowest, 12° at both Eureka Springs and Gilbert on the 2nd. The greatest daily range was 51° at Gilbert on the 6th.

Precipitation was light to moderate in most sections of the State either the 8th or 9th and about the 14th but more general from the 18th to the 21st and on the 27th and 28th, a number of stations reporting an inch or more either the 19th or 20th. Snowfall was comparatively light, the greatest depth reported being 2.0 inches at a number of stations in the northern portion. The ground was warm and the snow soon melted. The average precipitation for the 95 stations reporting was 2.11 inches which is 1.15 inches below the 47-year mean. Of the stations for which normals have been computed, only three had positive departures. Monthly amounts ranged from 0.22 inch at Thornburg to 3.69 inches at Texarkana. The greatest amount measured in any 24-hour period was 2.21 inches at Higden on the 19th.

The high water in the lower White and St. Francis River basins continued during the first half of the month. Over 32,000 families in nineteen eastern counties were effected by the flood and more than 60% of the buildings in Phillips, Lee, and St. Francis counties damaged. In Lee County alone 1,600 houses were washed from their foundations. Losses from flood in the State during the latter part of January and the month of February were as follows: On the Arkansas River, $35,500; the Black River, $20,500; the Ouachita River, $12,500; the White River, $381,000; the St. Francis River, $2,678,936.

The soil was too wet the first half of the month for much plowing but conditions were more favorable the latter half. In the eastern lowlands thousands of acres of land were inundated most of the month. Early gardens, potatoes, truck, and spring oats were planted in the southern half of the State about the middle of the month. Peaches were blooming in some southeastern counties by the 10th but the cool weather the latter part of the month retarded their development in most other sections. Wheat, oats, meadows, and winter truck were in good condition at the close of the month. T.A.M.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters a,b,c, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Freeman Springs, Dover; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖‖ 24 hours ending 7 a.m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

VOL. XLII LITTLE ROCK, ARK., MARCH, 1937 No. 3

PRICE: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

This was the coldest March since 1932. Temperatures were mostly above normal the first week of the month but thereafter fluctuations were frequent with negative departures predominating during the latter half of the month. The warmest weather occurred from the 19th to the 24th, while it was coldest in most sections on the 1st. Departures were more than 20° below normal in all sections from the 26th to the 28th. The mean temperature for the State, based on the reports of 63 stations, was 48.7° which is 3.8° below the 47-year average. Monthly means ranged from 42.8° at Gravette in the extreme northwestern portion to 53.2° at Camden in the extreme southern portion. The highest temperature reported was 48° at Magnolia on the 19th; the lowest, 14° at Gilbert on the 1st. The greatest daily range was 47° at Amity on the 2d.

Precipitation was well distributed during the month with the heaviest rainfall occurring in nearly all sections on the night of the 23d-24th. Snowfall was heaviest in central and southwestern sections on the 15th and in the northwestern portion on the 30th. The greatest depth reported was 2.5 inches at Mount Ida on the 15th, while the average for the 96 stations was 0.3 inch. The average precipitation for the State was 3.04 inches which is 1.66 inches below the 47-year mean. Of the stations for which normals have been computed, only 11 had positive departures. Monthly totals ranged from 0.73 inch at Mountain Home to 5.79 inches at El Dorado. The greatest amount measured in any 24-hour period was 2.78 inches at Arkansas City on the 24th. The average number of rainy days was 8.

A duststorm followed the rain on the morning of the 24th. Visibility was low in all sections of the State varying from one-half mile in the northwestern portion to one and one-quarter miles in the central.

The light rainfall was favorable for plowing and the preparation of land but the temperature was too low most of the time, especially the latter half of the month for planting and growth of early crops. Peaches, pears, and plums were severely damaged by the low temperatures the latter part of the month but damage was not uniform in the State. Gardens and spring truck were also damaged and growth has been slow. Some corn was planted in the southern portion the latter part of the month but in most sections farmers are waiting for warmer weather. Spring oats were badly frozen in some northern localities but the weather was favorable most of the month for winter truck. T.A.M.

WINDSTORMS

Hope (6 miles north of), 23d, moderate hail in connection with windstorms, several houses and barns unroofed, 2 hogs killed, 100 acres of radishes damaged, loss $1,000.

Pike City, 23d, buildings and sheds unroofed, loss $3,000.

Damaged by lightning:--Heber Springs, 24th, 3 people injured, $300 damage to house and barn.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitaion with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for he period to 1935, inclusive

Precipitation or March, 1937

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLII Little Rock, Ark., April, 1937 No. 4

Price: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Temperatures were considerably below normal most of the time from the 4th to the 11th and were freezing or lower on the 6th in most sections of the State except in counties near the southern border and along the Mississippi River. From the 12th to the 23d they were generally above normal but cool weather again overspread the State from the 24th to the 28th, light frost being reported on the 27th in the Ouachita Mountains and the Ozarks and at several stations in the eastern portion. The average temperature for the State, based on the records of 64 stations, was 61.7° which is 0.2° above the 47-year mean. Monthly means ranged from 54.4° at Gravette in the extreme northwestern portion to 65.8° at Magnolia in a southern border county. The highest temperature reported was 96° at Newport on the 17th; the lowest, 20° at Gilbert on the 6th. The greatest daily range was 47° at Brinkley on the 22d.

Though rainfall was somewhat below normal, showers fell at intervals which provided enough soil moisture for growing crops. The average precipitation for the State for the 98 stations reporting was 3.18 inches which is 1.63 inches below the 47-year mean. Of the stations for which normals have been computed, only four had positive departures. Monthly amounts ranged from 1.30 inches at Monticello to 6.23 inches at St. Francis. The greatest amount measured in any 24-hour period was 2.85 inches at Parkin on the 30th. The average snowfall for the State was 0.1 inch, all of which fell in northwestern counties during the night of the 4th-5th, Fayetteville reporting 5.0 inches. Windstorms occurred during the night of the 23d-24th but not much damage was done except at Benton where a small tornado occurred. Dust overspread the State following the rain of the 24th. Visibility was as low as one mile in some sections of the northwestern portion on the 25th and three miles in the southwestern portion on the 26th.

The weather during April was favorable for the preparation of land for planting but too cold the first decade for germination and growth of cotton and corn. Some cotton was planted in the southern portion the first of the month but planting was not general until about the 12th. Early corn which was planted the latter part of March was damaged somewhat by the low temperatures on the 6th and some early cotton had to be replanted. Growth of cotton and corn was checked by the cool weather from the 24th to the 28th but no serious damage resulted. In the southern portion the latter part of the month early corn was being cultivated and in southern, central and eastern portions cotton was coming up to a good stand. The weather was favorable for wheat, oats, meadows, pastures, and truck. Apples were in full bloom by the close of the month and strawberries ripening in the southern portion. T.A.M.

Tornado, Heavy Hail, etc.

Tornado:--Benton, Saline County, 23d, 9:15 p. m., from sw, path 50 to 75 yards wide and 2 miles long, 2 killed, 30 injured, 5 seriously, and $40,000 damage to property.

Heavy Hail:--Coal Hill to Harmony, western Johnson Co., 23d, 7 p. m., path one-half mile wide and 12 miles long, heavy in places, $2,000 damage to crops and $2,000 damage to roofs of buildings.

Southern Montgomery Co., 23d, 7 to 7:45 p.m., Hopper to Greenwood and north to Caddo Gap, considerable damage to gardens.

Newport and vicinity, Jackson Co., 23d, 4 p.m., path 4 miles long, some damage to gardens, $15,000 damage to windows and roofs of buildings. Hailstones as large as hen eggs, some reported larger.

Lightning:--Dumas, (near), 29th, barn destroyed, loss $1,000.

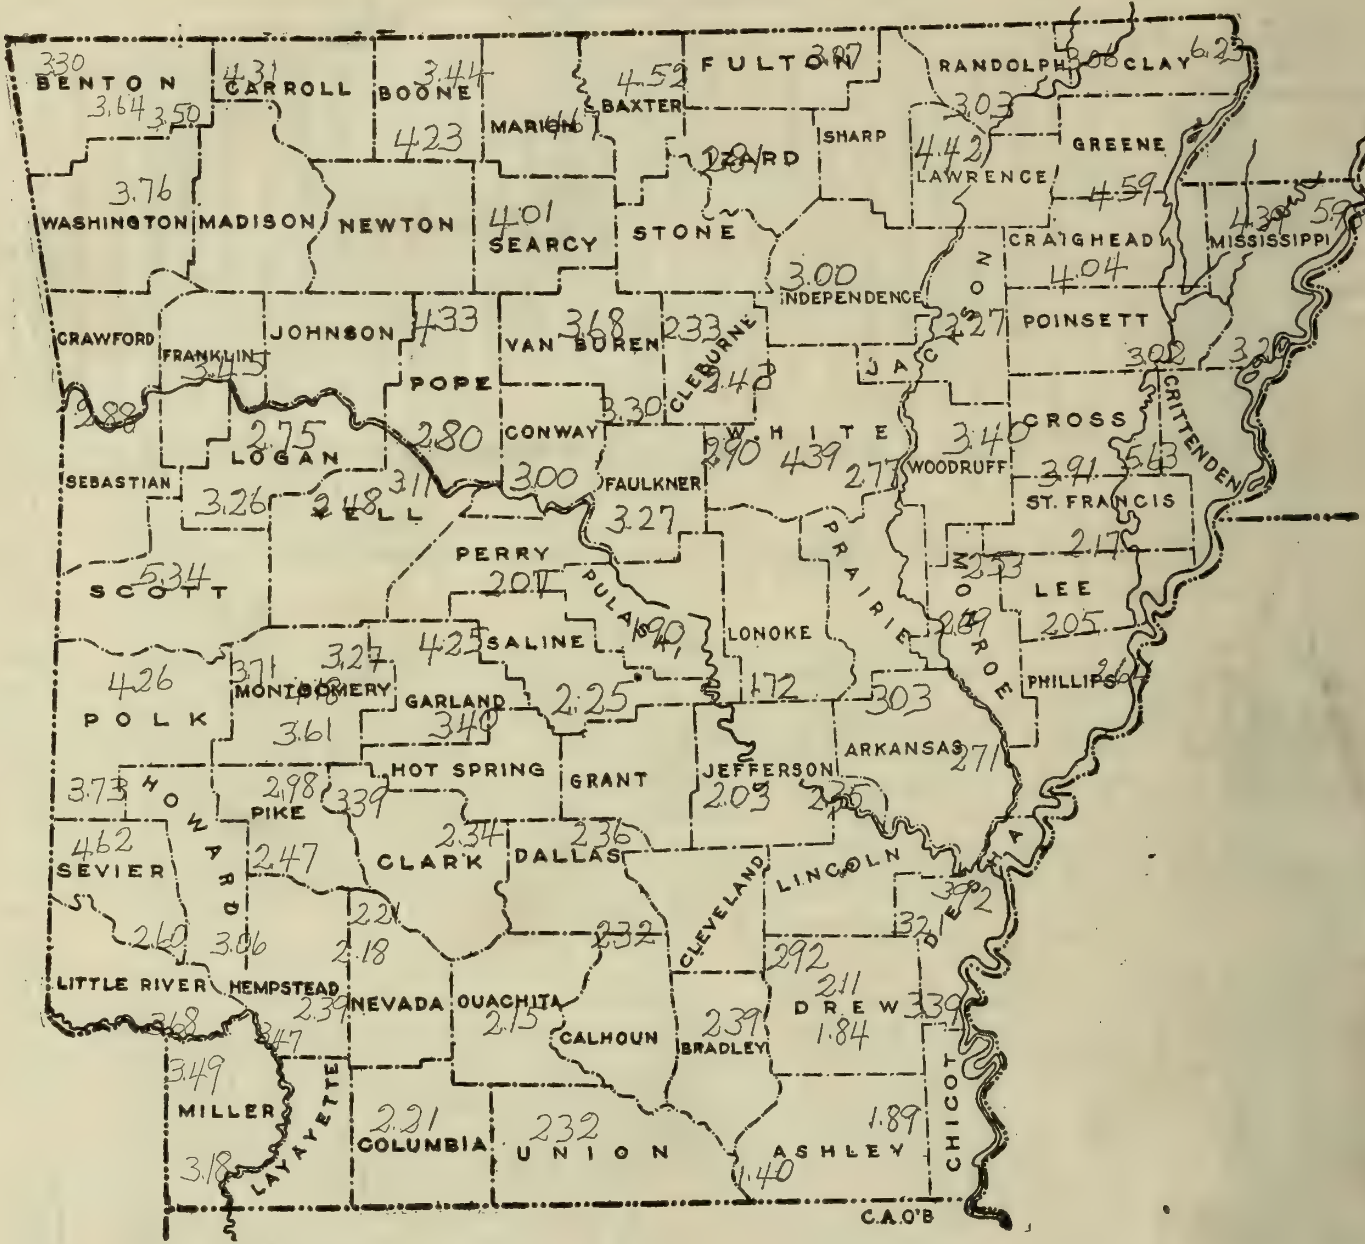
T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters [a], [b], [c], number of days missing. †Also on other dates. ‡‡P. O: addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Freeman Springs, Dover; Index, Route 5, Texarkana. Lutherville, Route 1, Lamar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ǁǁ 24 hours ending 7 a. m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Precipitation for April, 1937



U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLII LITTLE ROCK, ARK., MAY, 1937 No. 5

PRICE: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Temperatures were below normal the first five or six days of May and again from the 13th to the 15th, with light frost reported in the Ouachita Mountains on the 14th and 15th, while they were nearly continuously above the latter half of the month, with the warmest weather occurring in most sections from the 28th to the 31st. The mean temperature for the State, based on the records of 65 stations, was 71.1° which is 2.0° above the average for the past 47 years. Monthly means ranged from 64.4° at Dutton in the Ozarks to 74.8° at Magnolia in a southern border county. The highest temperature reported was 99° at Dumas and Hot Springs on the 28th and again at Dumas on the 31st; the lowest, 36° at Dutton on the 14th. The greatest daily range was 40° at Lead Hill on the 7th.

Showers were frequent the first half of the month with heavy rains occurring the 1st and 2d and again on the 13th, but thereafter rainfall was light and scattered except on the 22d and 23d when moderate to rather heavy rains occurred in the western portion. The average precipitation for the State for the 98 stations reporting was 3.63 inches which is 1.36 inches below the 47-year mean. Of the stations with records of 10 years or more, only 8 had positive departures. Monthly totals ranged from 1.28 inches at Crossett in the extreme southeastern portion to 6.71 inches at Lutherville on the southern slope of the Ozarks. The greatest amount measured in any 24-hour period was 4.70 inches at Cotter on the 2d. The average number of rainy days was 7.

Light dust was reported in all sections of the State on the 13th but was heaviest in the western portion.

A slight earthquake was felt in the northeastern portion of the State on the 16th at 7:15 p. m.

Farm work was delayed in northern and western portions the first half of the month by the frequent rainfall but the rains were very beneficial in southeastern and some central portions where the soil was becoming dry. Cotton planting was about completed in southern and central portions by the middle of the month and was well advanced in the northern. Considerable replanting was necessary in early plantings. Nights were too cool about the 15th for good growth but no serious damage was done. Cultivation and chopping of cotton progressed rapidly the latter part of the month and the chopping of cotton was almost completed by the close of the month except in later plantings. The planting of early corn was about completed the first week of May and much of it in the southern portion had been cultivated by the middle of the month. Wheat and oats were being harvested rapidly the last of the month and much alfalfa hay was cured under favorable conditions. Worms did considerable damage to oats in some southeastern counties but elsewhere the yield was good. The weather was very favorable for meadows, pastures, rice, fruit, and berries, and all kinds of truck.

T.A.M.

Heavy Hail:---Northeastern Phillips County, 4th, 4 p. m., small area, considerable damage to gardens and small plants. Hailstones 1-4 to 1-2 inch in diameter.

Moderate Hail:--Northeastern Arkansas Co., 2d, no report on damage. Southern Pulaski County, 12th, 3:30 p. m., slight damage to gardens and crops.

Damage by Lightning:---Southeastern Saline County, 12th, during the night, one house and one barn and contents destroyed, loss $2,000.

Correction:--April, 1937, Monticello mean temperature should be 64.8°. Mena, highest temperature should be 88° on the 15th.

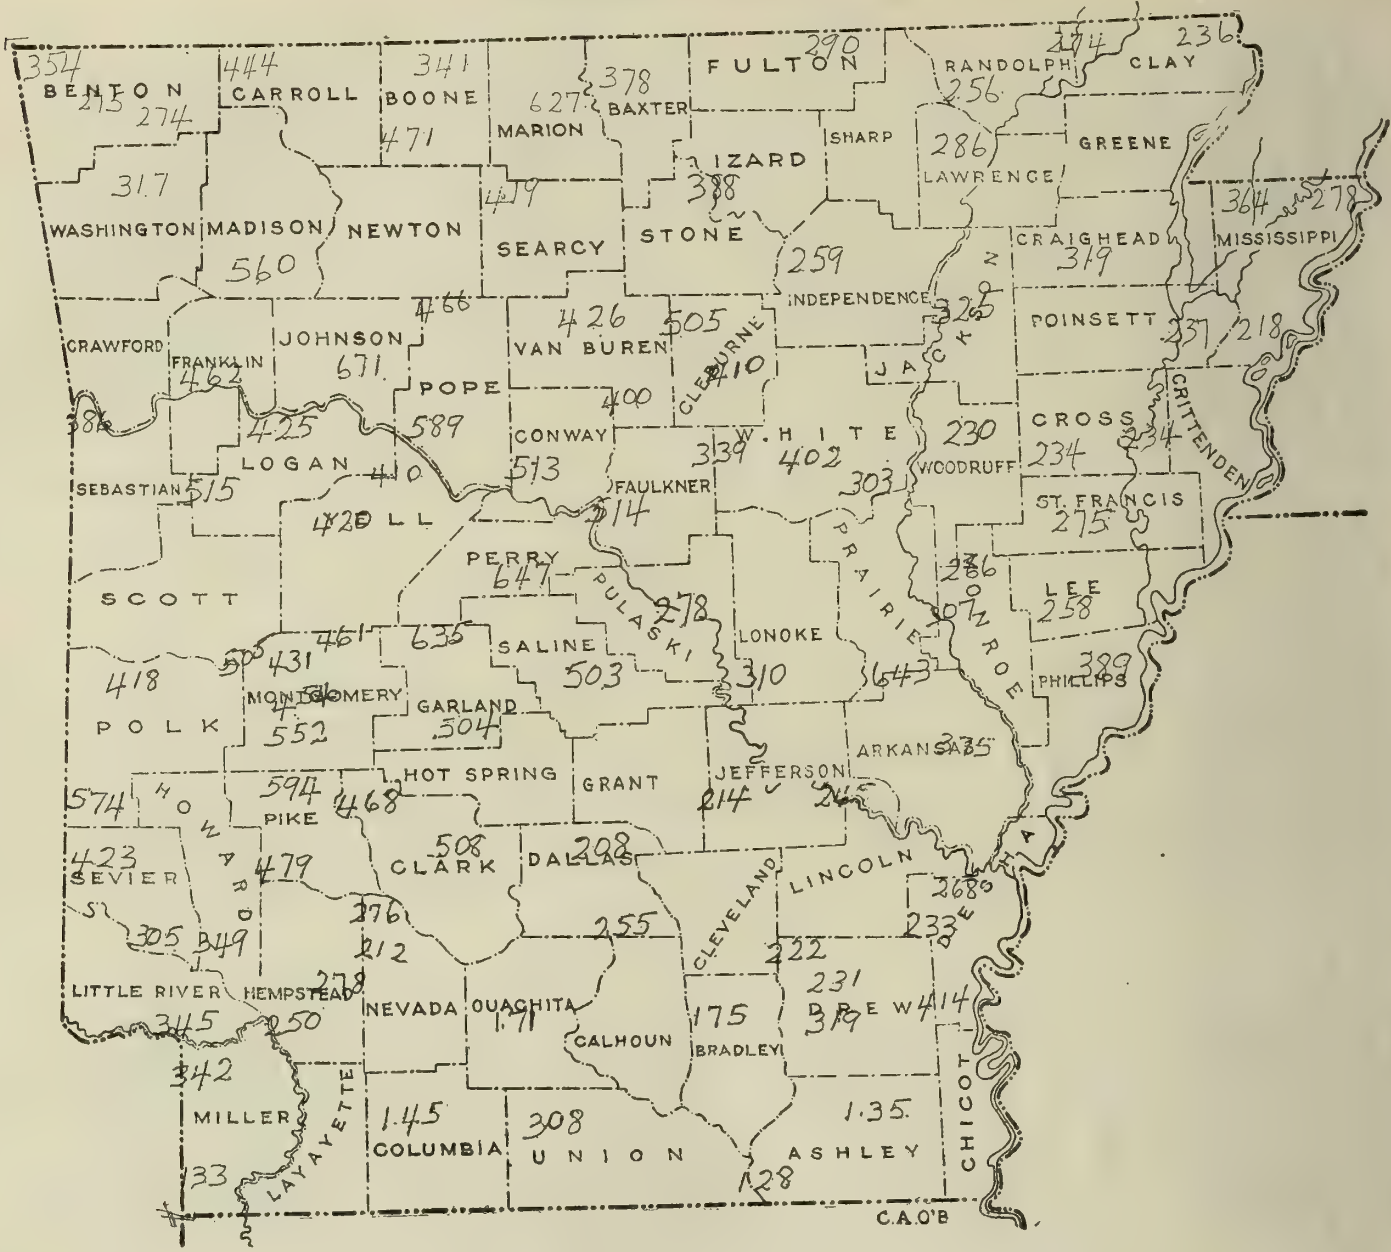
T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters a,b,c, number of days missing. †Also on other dates. ‡‡P. O: addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Freeman Springs, Dover; Index, Route 5, Texarkana. Lutherville, Route 1, Lamar; Rogers, Route 3, Rogers: Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||| 24 hours ending 7 a. m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Precipitation for May, 1937



U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLII   Little Rock, Ark., June, 1937   No. 6

Price: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Though temperatures during June were not unusually high, nearly all stations reported positive departures. The coolest weather occurred in most sections about the 6th or 7th, while temperatures were highest generally about the 26th or 27th. Daily means were continuously above normal from the 17th to to the 27th in all sections. The mean temperature for the State, based on the reports of 63 stations, was 78.8° which is 1.6° above the 47-year average. Monthly means ranged from 72.8° at Dutton to 81.7° at Hot Springs. The highest temperature reported was 106° at Hot Springs on the 27th; the lowest, 45° at Dutton on the 7th. The greatest daily range was 46° at Gravette on the 7th.

Showers were frequent the first half of the month with only a few days intervening, while rainfall was comparatively light and scattered the latter half with showers in most sections from the 27th to the 29th. A number of stations reported an inch or more on the 28th or 29th but some sections in the northwestern portion received little or no rain after the 15th or 16th. The average precipitation for the 99 stations reporting, was 4.94 inches which is 0.90 inch above the 47-year mean. Of the stations with records of 10 years or more, 48 had positive departures and 29 negative. Monthly totals ranged from 1.66 inches at Little Rock to 9.55 inches at Corning. The greatest amount measured in any 24-hour period was 5.34 inches at St. Francis on the 10th. The average number of rainy days was 7.

The weather during June was favorable for the growth of cotton. Chopping was completed during the first decade and the crop was generally well cultivated though in some localities where rainfall was heaviest fields became grassy about the middle of the month. Blooms were reported in all sections of the State except the northern counties by the close of the month. Conditions were favorable for corn except that during the latter part of the month the soil was becoming too dry in some localities. Early corn was tasseling in nearly all sections by the close of the month. The crop is clean and has been well cultivated. The weather was favorable for threshing wheat and oats. Meadows, pastures, and truck crops were needing rain in some sections the latter part of the month but in most portions they were in good to excellent condition. T.A.M.

Tornadoes, Windstorms, Heavy Hail, etc.

Tornadoes:- Western Benton Co., 9th, 4 a. m. moved ENE. path one-fourth mile wide, none killed nor injured, property damage $35,000. Loss to orchards $2,000. More than 100 houses damaged in Decatur.

Eastern Carroll and southwestern Boone counties, 9th, 11:00 p. m. to 11:30 p. m., moved ESE, path one-half mile wide, 15 miles long, one killed, 50 injured, property damage $75,000. Orchard $50,000, 75 buildings demolished or damaged.

Windstorms:- Central and eastern Benton Co., 9th, buildings blown down, loss $10,000. Crops severely damaged.

Northern Faulkner Co., 9th, dozens of buildings wrecked; orchards, timber, and crops destroyed, several thousand dollars damage.

Central St. Francis Co., 9th, one killed by falling tree.

Southwestern Logan Co., 9th, 10,000 dollars damage to buildings; 15th, buildings and merchandise damaged, loss 50 dollars.

Northwestern Sebastian Co., 9th. 10,000 dollars damage to Athletic Mining Co. at Fort Smith. Lineman electrocuted at Greenwood.

Southeastern Jefferson Co., 15th. Several barns unroofed and several mules and hogs killed, loss 2,000 dollars.

Heavy Rain:-Carroll and Boone counties, 9th-10th M. & NA. Railroad and buildings damaged, loss 95,000 dollars.

Heavy Hail:- Southwestern Pulaski Co., 5th, hail and windstorm. Hailstones one inch in diameter, very heavy in places, path three-fourths mile wide, 3,000 dollars loss to crops from hail, about 500 dollars damage to property from wind.

Southern Boone Co., 15th. Hail fell for 30 minutes damaging wheat, oats, and other crops severely. Some window glass broken.

Northwestern Clay Co., 29th, 5,000 dollars damage to crops.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Freeman Springs, Dover; Index, Route 5, Texarkana. Lutherville, Route 1, Lamar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||| 24 hours ending 7 a.m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

H. S. COLE

VOL. XLII LITTLE ROCK, ARK., JULY, 1937 No. 7

PRICE: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Temperatures were generally above normal in the northwestern portion of the State during the first half of July but departures were not so marked in most other sections, while during the latter half temperatures averaged slightly below normal. The mean temperature for the State, based on the reports of 61 stations, was 80.4° which is 0.1° below the 47-year average. Monthly means ranged from 76.8° at Gilbert to 83.0° at Dumas and Ft. Smith. The highest temperatures reported was 106° at Booneville on the 5th; the lowest, 52° at Wynne on the 1st. The greatest daily range was 42° at Crossett on the 2d.

Showers occurred at frequent intervals in most sections of the State during the month but the distribution was irregular. In some sections rainfall was light and scattered while in most others amounts were generally sufficient for growing crops. The average precipitation for the 98 stations reporting was 3.71 inches which is 0.09 inch below the 47-year mean. Of the stations with records of 10 years or more, 40 had negative departures and 34 positive. Monthly totals ranged from 0.44 inch at Highland to 9.77 inches at St. Francis. The greatest amount measured in any 24-hour period was 7.45 inches at St. Francis on the 4th.

The weather during July was generally favorable for the growth of cotton. Some sections of the State received too much rain, causing rank growth, while in hill sections the soil was too dry part of the time. However, for the State as a whole, the crop fruited satisfactorily and mature bolls were reported even in northern counties by the close of the month. The early corn crop was damaged somewhat in some sections by the lack of moisture but in most portions conditions were favorable for a good crop. It was too dry in some portions of the up-lands for late corn but soil moisture was generally sufficient elsewhere. The showers the latter part of the month were very favorable for meadows, pastures, and truck crops.

Tornadoes, Windstorms, Heavy Hail, etc.

Heavy Hail:---Northwestern Independence Co., 3d, 5:30 p. m., hail fell over area 20 miles wide. Slight damage to gardens, crops, and buildings in some sections.

Southern and southeastern Benton Co., 5th, 2 a. m. to 4 a. m. Hail accompanied by wind stripped fruit trees of their fruit and beat tomatoes, beans, and other truck crops into the ground. 4,000 bushels of peaches on ground near Lowell. Considerable damage to buildings from wind in some localities. Loss several thousand dollars.

Northwestern Benton Co., 5th, 6:30 p. m. Hailstones one inch to one and one-half inches in diameter fell over area one mile wide damaging vineyards and some orchards severely. $10,000 loss to orchards and crops, considerable damage to composition roofs.

Northern Hot Springs Co., 5th. Hail for 40 minutes damaged corn 75% over small area. Fruit and gardens almost a total loss. No estimate of damage.

Southern Cleveland Co., 7th, 10 a. m. Hail damaged cotton and corn over area one-half mile wide and 4 miles long. Loss $1,500.

Killed by Lightning:---Near Beebe, 16th, 2 people; near Brister (9 miles south of Magnolia). 20th, 1 person.

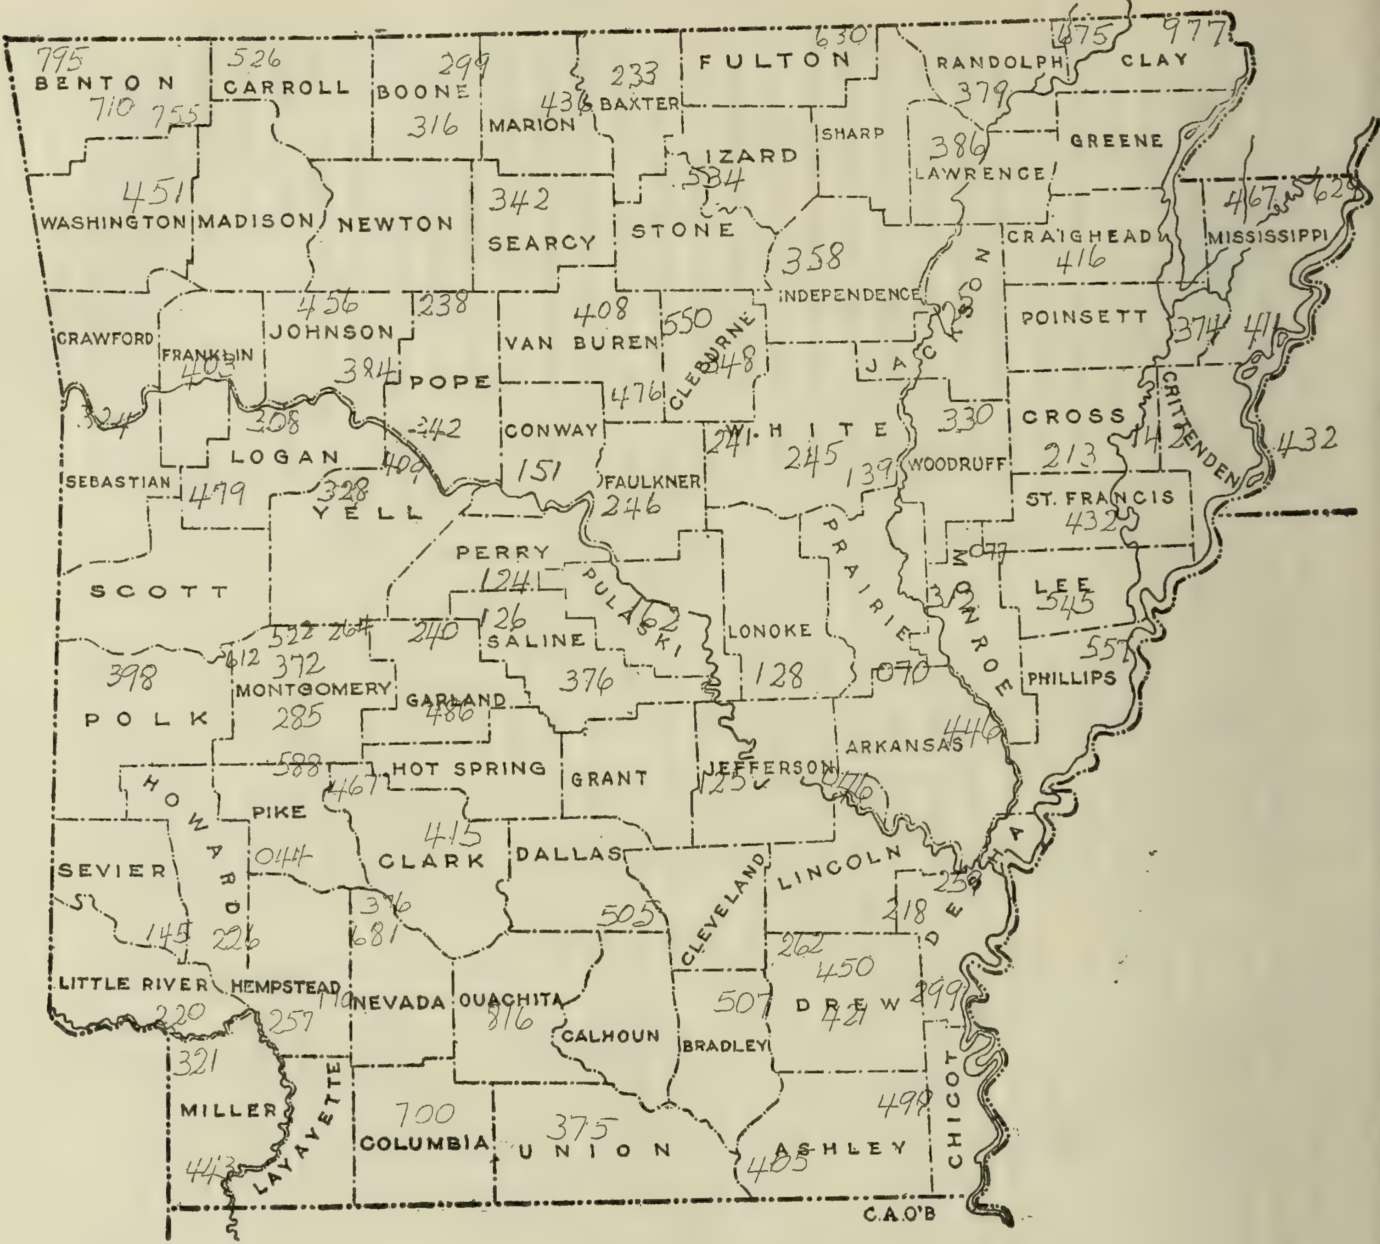
T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a}, ^{b}, ^{c}, number of days missing. †Also on other dates. ‡‡P. O ddresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Freeman Springs, Dover; Index, Route 5, Texarkana. utherville, Route 1, Lamar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖‖ 24 hours ending 7 a.m. *Included in next measurement. Data in italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Precipitation for July, 1937



U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLII Little Rock, Ark., August, 1937 No. 8

Price: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Temperatures were nearly continuously above normal in August but as in July departures were higher in northwestern and central portions than along the Mississippi River and in southeastern sections. The mean temperature was below normal for only two days at Ft. Smith and three days at Little Rock during the entire month. The average temperature for the State, based on the reports of 67 stations, was 82.3° which is 2.3° above the 47-year mean. Of the stations with records of 10 years or more, only four in the southern portion had negative departures. Monthly means ranged from 76.3° at White Rock in the Ozarks to 85.3° at Hot Springs. The highest temperature reported was 111° at Conway on the 10th; the lowest, 55° at Lead Hill on the 13th. The greatest daily range was 46° at Gilbert on the 10th.

Rainfall was light and scattered the first half of the month in many sections while it was general in nearly all portions of the State from the 21st to the 24th. The average precipitation for the 98 stations reporting was 3.45 inches which is 0.13 inch below the 47-year mean. Of the stations with records of 10 years or more, 30 had positive departures and 44 negative. Monthly totals ranged from 0.22 inch at Corning in the extreme northeastern portion of the State to 12.69 inches at De Queen in the extreme southwestern portion, with seven other stations reporting less than one inch. The greatest amount measured in any 24-hour period was 5.02 inches at DeQueen on the 23d and in 48 hours 9.90 inches at the same place on the 22d and 23d. The average number of rainy days was 7.

The weather was too hot and dry for cotton in much of the uplands of the State during the first three weeks of August, the high temperatures of the second week causing considerable shedding where soil moisture was deficient, but in the heavy cotton producing areas conditions were much more favorable. Picking began in a few localities the first week of the month, two bales being ginned on the 4th in the southeastern portion of the State, but not enough cotton was open for picking to become general until after the middle of the month. The early corn crop was nearly matured in most sections before the high temperatures of the 10th, but in some localities some damage occurred. The general rains from the 21st to the 24th were very beneficial for late corn but in many sections of the uplands considerable damage had already occurred. Meadows, pastures, and truck crops were also damaged by the hot, dry weather during the second week but in nearly all portions there was sufficient moisture the latter half of the month for good growth. The weather was favorable for rice in most portions of the belt and the early crop was about ready for harvest the latter part of the month. Late potatoes were being planted at the close of the month and apples were in excellent condition.

Corrections:--June, 1937

Camden, wind direction should be SE. Rock Springs, page 32, total precipitation should be 5.74 inches. State mean, page 31, period 4.95 inches; departure +0.91.

For windstorms, etc., see page 48.

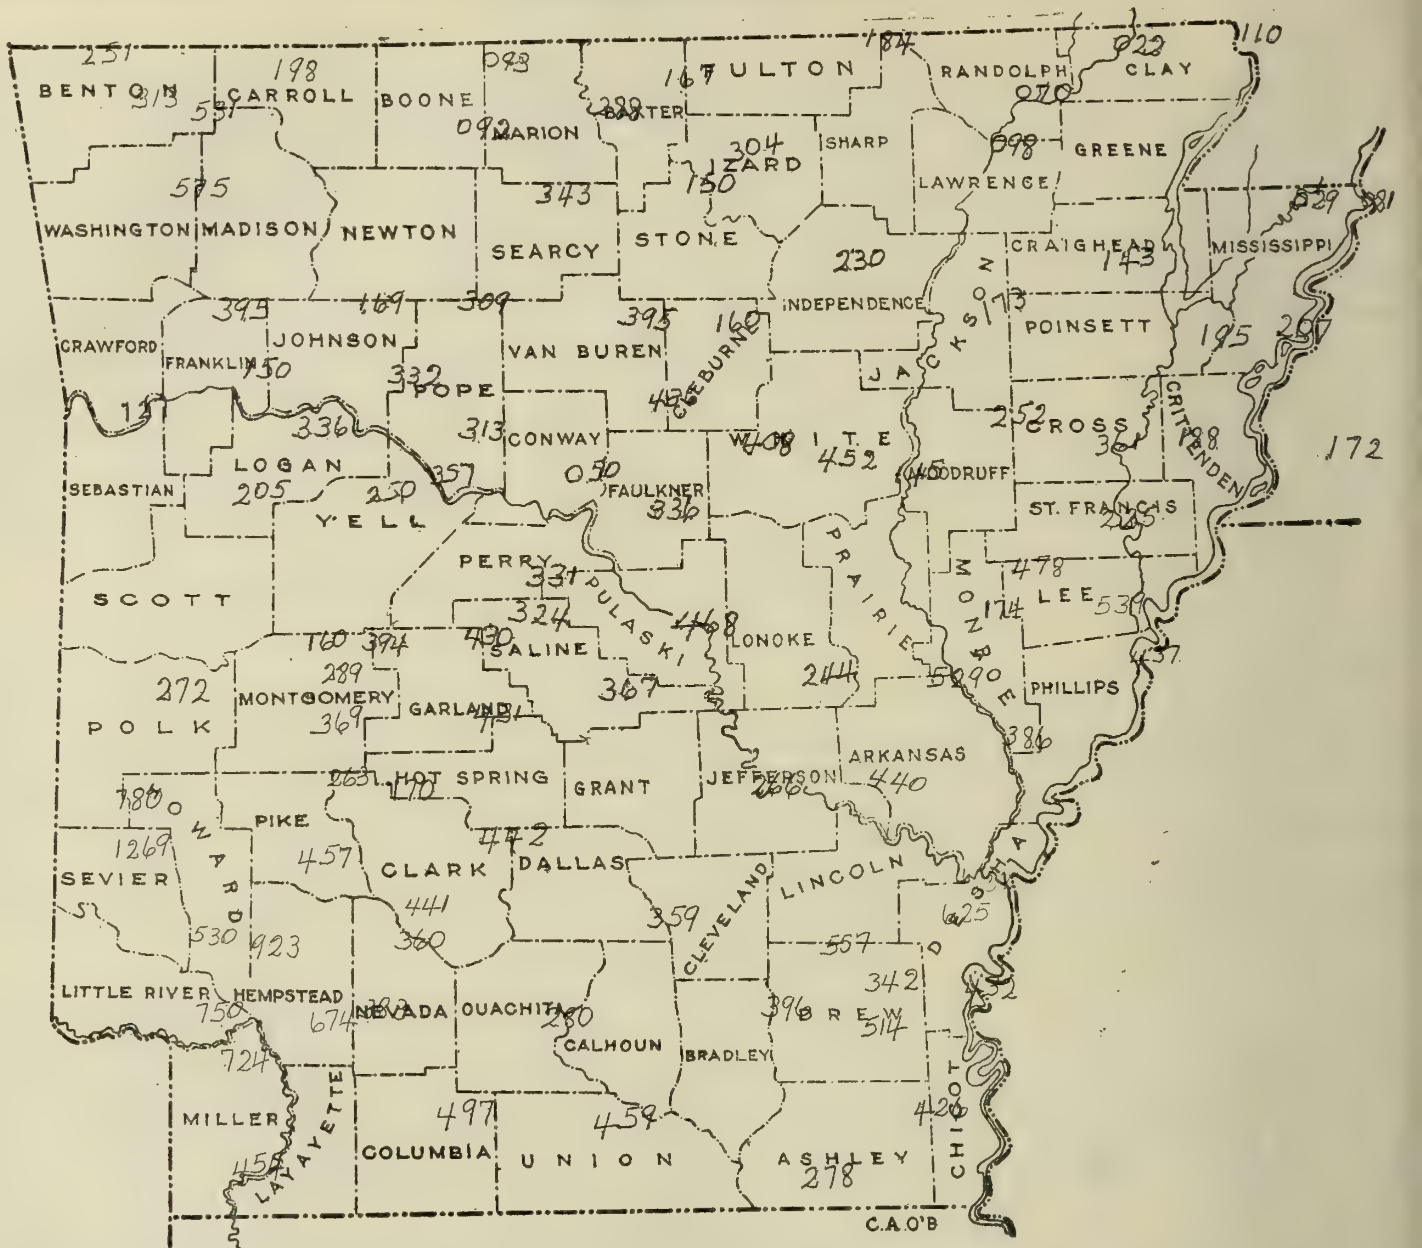
T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. |||| 24 hours ending 7 a.m. Data in italics interpolated. *Included in next measurement.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Precipitation for August, 1937



Windstorms, Heavy Hail, etc.

Windstorms:-Northwestern Nevada Co., Prescott to Emmet, 5th, about 1:40 p. m., six business houses partially unroofed in Prescott and one plate glass window damaged and one building partially unroofed in Emmet, total damage $1,250.

Southeastern Pope Co., Moreland and vicinity, 10th, severe windstorm accompanied by heavy hail, several barns and outbuildings destroyed, other buildings damaged, loss abou $10,000.

Heavy Hail:--Northwestern Saline Co., Alum Fork and v cinity, 10th, no report on damage.

Southeastern Pope Co., Moreland and vicinity, 10th, a crops in area one and one-half miles wide total loss, damag about $10,000.

Vol. XLII Little Rock, Ark., September, 1937 No. 9

Price: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Temperature means were below normal over most of the State except at a few places in Benton, Boone and Sebastian counties. The average temperature for the State, based on the reports of 69 stations, was 72.7° which is 1.7° below the 47-year mean. Monthly means ranged from 65.8° at White Rock, Franklin County, to 76.8° at El Dorado. The highest temperature reported was 102° at Gravette on the 8th and the lowest, 34° at Lead Hill and Thornburg on the 27th.

The average precipitation for the 96 stations reporting was 4.27 inches which is 0.86 inch above the 47-year mean. The distribution of rainfall was rather irregular, ranging from a monthly total of 0.32 inch at Texarkana to 15.18 inches at Bentonville. Rainfall totaling more than 8.00 inches was reported in Benton, Craighead, Johnson and Perry Counties. Precipitation was below normal in the southeastern section and in Baxter, Little River, Miller, Hempstead, Nevada and Clark Counties. The greatest 24-hour amount reported was 5.80 inches at Gravette on the 8th. The rainfall of 15.18 inches at Bentonville is an all-time record for that station, and almost equals the September record of 15 to 17 inches at some southern stations in 1913. Damage to roads and bridges was reported in Benton County as a result of the heavy rainfall.

The weather during September was favorable for late corn, meadows, pastures, vegetables and fruit most of the month. The weather the first decade was marked by frequent scattered showers. Heavy rains were reported from the 2d to the 5th and again on the 8th and 9th in most central and northern portions. The unusual number of rainy days the first part of the month was decidedly unfavorable for cotton, and reports indicated that in many localities some cotton was beaten down and ruined by the heavy showers. Abundant sunshine and dry winds from the 10th to the 24th were favorable for cotton. The lint dried out and the bolls opened rapidly. Picking and ginning also progressed rapidly the latter part of this period. Rainfall occurred on the 24th and 25th in all portions of the State but the amounts were unevenly distributed, being from 4 to 5 inches at Jonesboro, Newport and Camden to less than an inch over the area extending from the north-central counties to the southwestern corner of the State. The cotton dried out quickly after this brief rain period so that the latter portion of the month was again favorable for cotton. Near the close of the month the greater portion of the crop was reported open except in the eastern lowlands where it was opening rapidly. In some southern portions, the greater portion of the crop was picked. The early corn crop was being gathered and the late crop nearing maturity. O.D.N.

Heavy Rain, etc.

Heavy Rain:--Benton Co., 8th-9th, many roads, culverts and bridges washed out and damaged by heavy rains. Estimated damage $25,000.

Corrections:

Dardanelle, wind direction for June should be SE. St. Charles wind direction for August should be SE.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖‖ 24 hours ending 7 a. m. Data in italics interpolated. *Included in next measurement.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLII Little Rock, Ark., October, 1937 No. 10

Price: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

Temperature means were below normal this month. The mean temperature based on the reports of 66 stations was 60.8°, which is 1.7° below the 47-year mean. Monthly means ranged from 64.6° at Texarkana to 56.8° at Mammoth Spring. High temperatures were reported at nearly all stations on the 6th, the highest being 96° at Subiaco. Lowest temperatures for the month occurred on the 23d at nearly all stations, the lowest being 17° at Lead Hill. Heavy to killing frost occurred on the morning of the 23d over the entire State.

The average precipitation for the 96 stations reporting was 4.66 inches which is 1.45 inches above the 47-year mean. Precipitation was above normal in all but the northwestern and extreme west-central counties, and northern Garland, and southwestern Pike counties. Monthly totals ranged from 9.05 inches at Portland in Drew County to 0.98 inch at Highland in Pike County. The greatest 24-hour rainfall reported was 3.40 inches at Marianna on the 17th. The first snowfall of the season was a trace on the 22d recorded at Green Mountain in Stone County. There were four rainy periods during the month. From the 2d to the 4th, rainfall ranged from less than a quarter of an inch over the extreme western and northwestern counties to over 4 inches in Ashley, Independence and Randolph counties in the eastern portion. On the 9th light rains were reported over the State except in Benton and Boone counties where more than an inch occurred. On the 12th and 13th light rains fell in all except the extreme northern counties. From the 17th to the 19th rainfall was general over the State, ranging from less than an inch in the northwestern portion to four or more inches in the south-central, Desha, and Lee counties. The average number of days with 0.01 inch or more precipitation was 8.

The month was favorable for the maturing and harvesting of the cotton crop, although the few rainy days during the first three weeks delayed picking and ginning. Much cotton was still unpicked in the lowlands at the end of the month. The weather was favorable for wheat, oats, meadows, pastures, late potatoes, fruit and fall truck, until the 23d when the killing frost and freezing temperatures stopped growth of all exposed vegetation. Most of the late corn matured during the month and harvesting progressed rapidly during the last week. The month had an average of 18 clear, 4 partly cloudy, and 9 cloudy days.

O.D.N.

Tornado

Carden Bottom, Yell, Pope and Conway Counties, 18th, 11:30 p. m., from sw, path 300 yards wide and about 10 miles long, 2 persons injured and $150,000 damage to property.

Corrections

The average precipitation for September, 1936, should be 4.75 inches in the table "Comparative Data for September", Climatological Data for September 1936 and 1937.

Climatological Data for September, 1937, have the following corrections:---Hope, monthly mean, 75.0°, departure from normal −1.6°; Little Rock Airport, maximum temperature on the 22d, 94°: Marked Tree, date of maximum, 21st†; El Dorado, prevailing wind direction S; White Rock, minimum temperature 2d, 64°, mean minimum 54.7°, mean temperature 65.6°*.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters $^{a, b, c}$, number of days missing. †Also on other dates. ‡‡P. O addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1. Altheimer; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖‖ 24 hours ending 7 a.m. Data in italics interpolated. *Included in next measurement. ¶All pool stages except 21st and 22d.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period: for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Precipitation for October, 1937

Vol. XLII Little Rock, Ark., November, 1937 No. 11

Price: 5 Cents per Copy: 25 Cents per year

GENERAL SUMMARY

Temperature means were below normal the entire month. The mean temperature, based on the reports of 67 stations, was 48.3°, which is 3.1° below the 47-year mean. Monthly means ranged from 53.6° at Magnolia to 42.2° at Lead Hill. The highest temperature for the month was reported on the 1st at nearly all stations, the highest being 90° at Dumas. Lowest temperatures occurred on either the 20th or 21st, the lowest reported being 6° at Lead Hill on the 21st. The greatest daily range was 51° at Lead Hill.

The average precipitation for the 96 stations reporting was 4.99 inches, which is 1.27 inches above the 47-year mean. Precipitation was below normal over the northern half of the State; above normal over the southern half and considerably above over the southwestern and south-central counties. Monthly totals ranged from a little over 9 inches in Miller and Bradley counties to 1.54 inches at Gravette in northwest Benton County. The greatest 24-hour rainfall reported was 4.75 inches at Alum Fork Reservoir in northwest Saline County. There were four rainy periods during the month. From the 2d to the 5th light scattered showers occurred over the northern counties as far south as Polk, Saline, Jefferson and Desha. From the 8th to the 10th, inclusive, was a period of general rain for the entire State. The amounts ranged from less than an inch in Benton County to over 5 inches in Saline, Garland, Yell, Miller, Bradley and Ouachita counties. Precipitation was reported from the 15th to the 19th and again on the 27th and 28th. The only heavy rainfall during these two periods occurred on the 15th and 16th in the south-central and southwestern counties, the amounts ranging from 2 to 4 inches. The heavy rainfall of the 9th and 10th, and 15th and 16th in the Ouachita drainage area caused a considerable rise in the Ouachita River at Camden, rising to a crest of 23.9 feet on the 19th. Snowfall was reported on the 16th over the northern and western parts of the State. Light snow was also reported on the 19th, 22d and 28th in many counties. Snowfall for the month totaled 5 inches in Benton and Carroll counties, and 2 or more inches in the rest of the northwestern and extreme northern counties. The average number of days with 0.01 or more precipitation was 8.

The weather was favorable for picking cotton the first week, but the rest of the month was more or less unfavorable and much cotton remained in the fields in the eastern lowlands at the end of the month. Corn and other feed crops were gathered rapidly during the dry days of the month. Winter crops were reported in good condition. The month had an average of 13 clear, 6 partly cloudy and 11 cloudy days. O.D.N.

LIBRARY OF THE ... 1938

Corrections

Amity, date of maximum temperature for October should be 30th.

Thornburg, number of cloudy days for October should be 9.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O Addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1, Altheimer; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. |||| 24 hours ending a.m. Data in italics interpolated. *Included in next measurement. ¶All pool stages except 11th to 14th, inclusive.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

VOL. XLII LITTLE ROCK, ARK., DECEMBER, 1937 No. 12

PRICE: 5 Cents per Copy; 25 Cents per year

GENERAL SUMMARY

The mean temperature for December, based on the reports of 67 stations was 42.2°, which is 0.5° below the 47-year average. Monthly means ranged from 48.0° at Magnolia in Columbia County to 31.8° at White Rock in Franklin County. During the first 12 days of the month the temperatures were below normal over the entire State, with minimum readings ranging from 0° at Lead Hill in the northern part of the State to 15° at Portland and 16° at Magnolia in extreme southern counties. The rest of the month was mild and cloudy with an unusual number of foggy, rainy days. The highest temperatures were recorded around the 15th and the last few days of the month, the highest for the month being 78° at Magnolia on the 16th. The greatest daily range was 42° at Lead Hill and Mount Ida.

The average precipitation for the 100 stations reporting was 4.61 inches which is 0.32 inch above the 47-year average. The heavy rains in the southwestern counties were responsible for the positive departure since the greater portion of the State had negative departures. Nearly all stations in the Arkansas, White and St. Francis drainage areas reported negative departures. Monthly totals ranged from 11.35 inches at Highland in Pike County to 2.49 inches at Ozark in Franklin County. Monthly amounts exceeding 8.00 inches were noted in the southern border counties and in Pike and Bradley Counties. Snowfall averaged 0.1 inch for the month, all of which occurred on either the 7th or 8th. The average number of days with 0.01 inch or more was 11.

The continuous rains the latter half of the month with several heavy showers in the southern counties caused rivers to rise sharply in the southern part of the State. The Ouachita went above the flood stage of 26 feet at Camden on the 28th of December and reached a crest of 30.09 feet at noon January 1st. Reports from Ouachita and Union counties indicated that flood waters caused considerable damage to roads, and several highway bridges were damaged or destroyed. There was some evacuation in the lowlands. The operation of oil wells was suspended in the Smackover area, until the flood waters receded early in January. It was also reported that the water was over the Missouri Pacific track at Griffin, and over the Rock Island track south of El Dorado requiring sandbagging at many points; however, both railroad lines maintained train service on their regular schedule.

The weather was favorable for farm activity the first two weeks, but growth of winter grains was retarded due to cold weather. The warm, rainy weather the latter half of the month was beneficial for winter crops. The month had an average of 8 clear, 4 partly cloudy and 19 cloudy days. O.D.N.

Corrections

Glenwood, rainfall November 10th should be 4.25 inches; total for the month should be 7.77 inches.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters a,b,c, number of days missing. †Also on other dates. ‡‡P. O addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Cornerstone, Route 1. Altheimer; Devils Knob, Salus; Green Mountain, Calico Rock. Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2. Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||| 24 hours ending 7 a.m. Data in italics interpolated. *Included in next measurement. ¶All pool stages except 18th to 23d, inclusive.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period: for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Precipitation for December, 1937

H. S. COLE

Vol. XLII   Little Rock, Ark., Year, 1937   No. 13

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The weather in Arkansas during the year 1937 was outstanding in several respects. The destructive weather of January with its sleet and glaze storms, record precipitation and resulting floods was unusual in the climatic history of the State. The ideal weather the rest of the year, especially during the growing season, gave the State its largest cotton yield since 1882.

The mean temperature for the year was 61.1° which is 0.3° below the 47-year average. This was the lowest mean since 1929 when the average temperature was 60.5°. Mean temperatures for six months showed positive departures. March and November were cold months, each averaging slightly more than 3° below normal. Mean temperatures for the stations ranged from 65.1° at Magnolia to 56.5° at Gilbert. The highest temperature for the year occurred on August 10th at nearly all stations, the highest being 111° at Conway. The lowest temperatures occurred on the 9th and 10th of December, the lowest being 0° at Lead Hill on December 10th.

The average precipitation for the year was 55.20 inches, which is 6.99 inches above the 47-year average. There were six months with positive departures, the amount for January being 8.22 inches above the average. Annual amounts ranged from 71.90 inches at St. Francis to 37.78 inches at Fort Smith. Snowfall for the year averaged 1.9 inches. The average number of days with 0.01 inch or more precipitation was 102. This number was exceeded in 1905 and equaled in 1923. There was an average of 154 clear, 90 partly cloudy, and 121 cloudy days for the year.

The weather for January was unusual for its continuous rains, an average of 17 days with 0.01 inch or more being recorded. The average precipitation for January was 12.61 inches which was a record for that month. This amount has been exceeded only once for any one month, that being the average of 12.93 inches in April, 1927. A serious flood was in progress at the close of the month in the eastern and southern parts of the State. It was estimated that 32,000 families in 19 eastern counties were affected by the flood. Thousands of acres of land remained inundated most of February. Losses from this flood were estimated at $3,128,000.

Glaze and sleet in January in the northwestern and northern parts of the State caused damages to the amount of $1,006,000 in their destructiveness to telephone, telegraph and power lines, and to timber and shrubbery. It was one of the severest storms of this nature in the climatic records of the State.

Tornadoes were reported in Saline County in April, in Benton, Carroll and Boone counties in June, and in Yell, Pope and Conway counties in October. Three persons were killed, 82 injured, and damages were estimated at $352,000.

Windstorms of a destructive nature, but not of tornadic force were reported in March, April, June, July, August and October, with damages amounting to approximately $50,500.

Heavy hail occurred in April, May and June, causing an estimated damage of $31,500 to crops and $17,500 to property.

The last killing frost in spring occurred about April 6th over most of the State, while the first killing frost in Autumn occurred October 23d. The growing season ranged from 168 days at Thornburg to 220 days at Parkin.

The weather during the growing season was very favorable for crops except for a dry, hot period the first 20 days of August. The cotton crop yielded 287 pounds to the acre, the highest yield since 1882. The small grains yielded more than the average. The peach orchards suffered from a cold period that lasted throughout March and the first week of April, but the weather during the remainder of the year was very favorable and the yield was above average. The yield of the strawberry crop was below average but those of all other truck crops were above.

Departures from normal temperature are computed from averages of entire period for stations having 10 or more years record. Departures of precipitation with 15 ears or more record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period 1935, inclusive. T., less than 0.01 inch rain or melted snow. Reference letters a, b, c, appearing in the table indicate number of days missing: † Also on later ates. ‡‡Post-office addresses of these stations as follows:-Big Lake Outlet, Manilla, .; Boughton, Route 4, Prescott; Devils Knob, Salus: Green Mountain, Calico Rock; ndex, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar: Rogers, Route 3, Rogers; Rosebud, Route 2, Mount Vernon; Springbank, Doddridge, urnpike, Dover; White Rock, Cass **Also later months.

Corrections:-Camden, Sept., page 50, departure from normal precipitation +2.10. Ft. Smith, December, page 68, number of loudy days 18. Harrison, December 3d precipitation 0.12 inch, monthly total 2.99 inches, departure +0.13 inch. Mount da, January, page 2, departure from normal precipitation +8.56 inches. Rogers, September, page 50, temperature departure −1.5°. Whitecliffs, March, page 14, total precipitation 3.92 inches. Wilson, December. page 68, precipitation departure −2.22 inches. Evaporation table, annual, page 78, Stuttgart, 1937, wind movement June, 1.9; July 2.0; annual 2.5.

H. S. COLE

Vol. XLIII Little Rock, Ark., January, 1938 No. 1

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The month was above normal in both temperature and precipitation. The temperature mean, based on the reports of 67 stations, was 42.5°, which is 1.1° above the 48-year average. Monthly means ranged from 48.6° at Magnolia, Columbia Co., to 35.6° at Lead Hill in Boone County. Temperatures ranged from 81° at El Dorado on the 21st to 4° at Devils Knob on the 26th and the 31st. The greatest daily range was 50° at Gravette on the 16th.

Precipitation was very light the first 19 days of the month, but heavy rains occurred during the period from the 20th to the 24th. Amounts of 10 to 11 inches were reported in Polk, Miller, Hempstead, Nevada and Arkansas counties. The average precipitation for the 98 stations reporting was 6.48 inches which is 2.04 inches above the 48-year average. Monthly amounts ranged from 11.58 inches at Grannis to 2.87 inches at Calico Rock. Measureable amounts of snowfall were reported in Benton, Johnson and Clay counties. The average number of days with 0.01 inch or more precipitation was 7.

Flood conditions followed the excessive rains in the southwestern and southern parts of the State. It was reported that ten to twenty thousand acres of farm land in the Red and Little River valleys were inundated the latter part of the month, and 200 tenant families were forced to leave their homes in these areas. The Red River at Fulton crested at 32.9 feet on the 28th. High stages occurred on the Ouachita, the crest at Camden being 40.7 feet on the 27th. It was reported that 20 oil wells in the Smackover area stopped operation due to the backwater up Smackover Creek from the Ouachita River. In the lower White flood stages were also exceeded, and the Cache River was high. Reports state that 150 families were forced to evacuate Cache bottoms. The White River at Georgetown reached a stage of 21.8 feet on the 31st and crested at 22.3 ft. on February 2d. The gage at Clarendon read 26.7 feet on the 31st and crested at 27.7 feet February 7th. The Petit Jean River at Danville went seven feet above flood stage on the 25th. Two men were drowned in the swollen Six Mile Creek near Paris.

Dense fog was reported in the state on 24 days. Dust was reported from the 14th to the 20th and on the 25th and 28th. Visibility in the Little Rock vicinity was reduced to 1 1-2 miles on the 17th and to 2 miles on the 18th. High winds were reported on the 24th, 25th, 29th and 30th, but no damage was reported. An Aurora Borealis was observed at one station on the 21st, 23d, 24th and 25th. Two stations reported a sunspot on the 18th and 19th.

The weather was favorable for the growth of wheat, oats, meadows, winter pastures and winter truck most of the month. The warm weather caused peach buds to develop in southern and central portions the middle of the month, but the growth was checked by the cold wave the last of the month. Little damage from freezing weather at the close of the month was reported, and the change to colder was favorable for fruit.

Corrections

Fort Smith, December 3d, precipitation 0.31 inch, December total 3.15 inches; departure from normal +0.39. Marked Tree, December, delete maximum temperature of 50° on 1st, move all maximum readings up one day and add 60 on 31st; mean maximum should be 49.1°.

Floods

In the Ouachita Basin, last week of January, estimated loss $28,800.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipita- on with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for he period to 1965, inclusive.

VOL. XLIII LITTLE ROCK, ARK., FEBRUARY, 1938 No. 2

PRICE: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The month of February averaged above normal in both temperature and precipitation. The monthly rainfall, most of which occurred during a five-day period, caused flood conditions on every river in the State during the latter half of the month.

The monthly mean temperature, based on the reports of 68 stations, was 50.9°, which is 7.3° above the 48-year average. This was the warmest February since 1932. The mean temperatures ranged from 56.5° at Magnolia in the southern part of the State to 45.6° at Devils Knob in the northern part. The highest temperature recorded during the month was 87° at Wilson on the 10th and at Wynne on the 12th. The lowest temperature was recorded on the 1st at nearly all stations, the lowest being 8° at Gravette and Mountain Home. The greatest daily range was 52° at Searcy.

The average precipitation, for the 100 stations reporting was 6.08 inches, which is 2.76 inches above 48-year average. This was the wettest February since 1903. Heavy rains were recorded during the period from the 14th to the 18th, and scattered showers continued in some sections until the 22d. Monthly amounts exceeding 10 inches were reported in Johnson, Garland and Crawford counties. The average number of days with 0.01 or more was 7. Snowfall averaged 0.1 inch, measurable amounts being reported in the northwestern counties and Mississippi County.

The weather was favorable for crops and farm work the first two weeks and the last week of the month. Large areas in the lowlands were inundated by flood waters during the last two weeks and crops in these areas were destroyed. Only a small acreage of spring crops had been planted before the heavy rains occurred. Peaches, plums and pears were in bloom in the southern and some central portions, and buds were developing rapidly in the northern section by the middle of the month. A considerable per cent of the blooms was killed in some western counties by the low temperatures during the third week.

Floods were reported on every river in the State as a result of the heavy rainfall. Crest reports on the Arkansas River were as follows: Fort Smith, 33.2 feet on the 19th; Dardanelle, 29.5 feet on the 19th; Little Rock, 26.2 feet on the 22d; and Pine Bluff, 31.7 feet on the 23d. In the Ouachita basin the crest stages were as follows: Arkadelphia, 29.0 feet on the 19th; Boughton, 23.6 feet on the 19th; and Camden, 41.1 feet on the 22d. In the Red River basin the crest at Fulton was 36.4 feet on the 24th. On the White River the crest stages were as follows: Calico Rock, 42.0 feet on the 18-19th; Batesville, 39.5 feet on the 19th; Newport 33.4 feet on the 20th; Georgetown, 31.5 feet on the 23d; Clarendon, 35.0 feet on the 28th; and at St. Charles 31.8 feet on March 3d. The crest at St. Francis on the St. Francis River was 23.5 feet on the 24th. Red Cross officials estimated that 500,000 to 600,000 acres had been flooded in 21 counties, forcing 24,000 refugees to leave their homes.

In the Arkansas basin the losses were estimated at $171,500; In the White basin $114,800. Estimated losses on the Red River and Little River in southwest Arkansas totaled $160,900. In the Ouachita basin $9,500. Complete flood loss reports in the St. Francis basin have not been received to date. Four lives were lost in the flood waters.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖‖ 24 hours ending 7 a. m. *Included in next measurement. ¶Pool stages from 3d to 14th, inclusive.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period: for stations with 10 to 14 years the means are for the period to 1935, inclusive. ‡Evap. reading Feb. 3d was .107, evap. for 4 days interpolated: Jan. 31st .027; Feb. 1 to 3, .080.

Precipitation for February, 1938

ARKANSAS SECTION

H. S. COLE

Vol. XLIII Little Rock, Ark., March, 1938 No. 3

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The month of March was above normal in both temperature and precipitation. The mean temperature for the month, based on the reports of 70 stations, was 60.3° which is 7.7° above the 48-year average. This was the warmest March since 1921 and the fourth warmest March in State records. The monthly means ranged from 65.9° at Magnolia to 51.2° at White Rock. The highest temperature during the month was 91° at Magnolia on the 21st. The lowest temperatures of the month occurred during the first week, the lowest being 20° at Mammoth Spring and Thornburg on the 1st and at Lead Hill on the 7th. The greatest daily range was 52° at Arkadelphia.

The average precipitation for the 101 stations reporting was 6.02 inches, which is 1.29 inches above the 48-year average. Monthly precipitation was below normal at stations in Desha, Logan, Ouachita, Ashley, Union, Miller, Scott, Bradley and Mississippi counties. The monthly amounts ranged from 10.71 inches at Higden in Cleburne County to 3.25 inches at Magnolia in Columbia County. Rainfall was well distributed throughout the month, with heavy amounts recorded at most stations during the last week of the month. The average number of days with 0.01 or more precipitation was 10.

Farm work progressed normally during the month, and much was accomplished in the way of plowing, preparation for planting, and planting, where the soil was dry enough to work. Little or no farm work was done in the lowlands that were submerged by flood waters the first part of the month. Wheat, winter oats, meadows, pastures, gardens and truck made excellent progress except where flood waters destroyed crops. Peaches, plums and pears, suffered from low temperatures and frost on the 1st and 6th but the damage was small. Fruit trees were blooming in the northern counties during the latter half of the month, and apple trees were beginning to bloom at the close of the month.

Fourteen tornadoes occurred during the month: one on the 15th, four on the 28th, and nine on the 30th. 18 persons were killed; 287 injured, and property losses were estimated at $366,000.

Moderate or heavy hail was reported as follows: Fayetteville 4th; Blytheville and Marked Tree 15th; Devils Knob 19th; Higden and Witt Springs 29th; Higden 30th and Gravette 31st. Damage by hail at Fayetteville was estimated at $1,000. Damage elsewhere was slight.

Rivers were high at the close of the month as a result of the heavy rains during the last week. Flood losses in the Arkansas River Basin, March 29th to April 2d, 1938 totaled $109,000. In the White River Basin, March 29th to April 21st, 1938, losses totaled $10,700. Flood losses in the Ouachita River Basin, March 29th to April 25th, 1938 totaled $1,400. Flood loss reports in the St. Francis River Basin and the Red River Basin have not been received to date. O.D.N.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries Reference letters ᵃ,ᵇ,ᶜ, number of days missing. †Also on other dates. ‡‡P. O addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. |‖ 24 hours ending 7 a. m. *Included in next measurement. ¶Pool stages from 14th to 16th and 22d to 27th, inclusive.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

ARKANSAS SECTION

H. S. COLE

Vol. XLIII LITTLE ROCK, ARK., APRIL, 1938 No. 4

PRICE: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The mean temperature and the precipitation average were near normal for the month of April. The mean temperature based on the reports of 70 stations, was 62.1°, which is 0.6° above the 48-year average. Temperatures were below normal at stations in Polk, Montgomery, and Ashley counties, and in the north-central portion of the State. Monthly means ranged from 65.4° at Arkadelphia to 56.9° at Grannis. The highest temperature for the month was 94° at Carthage on the 20th and at Magnolia on the 30th. The lowest temperatures occurred during the first ten days of the month, the lowest being 24° at Devils Knob on the 2d, at Thornburg on the 3d, and at Lead Hill on the 10th. The greatest daily range was 47° at Thornburg on the 23d.

The average precipitation for 101 stations was 4.83 inches, which is 0.03 inch above the 48-year average. Precipitation was above normal in the Ouachita Basin and in the Arkansas Basin above Little Rock; below normal at most stations over the rest of the State. Monthly amounts ranged from 8.85 inches at Crossett to 2.22 at Big Lake Outlet. The greatest 24-hour amounts was 4.40 inches recorded at Magnolia. Measurable amounts of snowfall were recorded in the northwestern counties, the average being 0.1 inch for the month. The average number of days with .01 or more rainfall was 8.

Farm work was delayed during the first three weeks due to the wet soil and low temperatures. The last week of the month was ideal for farm work and cotton planting progressed rapidly in nearly all portions of the State. Planting is about completed in some southern localities but was delayed in the northeastern portion of the State. Corn planting progressed rapidly at the close of the month and the early crop was nearly planted in many localities. The last killing frost of the season occurred during the first ten days of the month. It was reported that frost and freezing temperatures killed peaches and damaged other fruit in some northern and western counties. Frost did considerable damage to the apple crop in the northwestern counties. The weather was favorable for wheat, oats, meadows and pastures most of the month. O.D.N.

Wind and Hail

Atkins, Arkansas. (6 miles south of), Pope County, 29th, straight-line winds destroyed one barn and damaged other property, and injured one man. Loss $500. Heavy hail in connection with the windstorm damaged about 500 acres of cotton and corn and injured one youth. Path 1-4 mile wide. Loss estimated at $1,000. Clinton, Van Buren County, 30th, heavy hail, no damage reported.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitaion with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for he period to 1935, inclusive.

Precipitation for April, 1938

ARKANSAS SECTION

H. S. COLE

Vol. XLIII   Little Rock, Ark., May, 1938   No. 5

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The average temperature for the month, based on the reports of 69 stations, was 70.2°, which is 1.0° above the 48-year average. Monthly means ranged from 73.5° at Magnolia in Columbia County to 64.8° at White Rock station in Johnson County. The highest temperature during the month was 97°, recorded at Dumas on the 30th and 31st. The lowest temperature was 34°, recorded at Thornburg on the 9th. The greatest daily range was 44° at Harrison on the 21st.

The average rainfall for the 100 stations reporting was 4.62 inches, which is 0.36 inch below the 48-year average. Rainfall averaged above normal over the northern half of the State, below normal over most southern counties. The monthly amounts ranged from 0.87 inch at Arkansas City in the southeastern portion of the State to 15.27 inches at Eureka Springs in the northwestern portion. The greatest amount for 24 hours was 4.10 inches, recorded at Eureka Springs on the 29th. The average number of days with 0.01 inch or more rainfall was 9.

The cotton crop progressed normally in most portions of the State during the month. Cultivating and chopping were in progress in the northern portion and were about completed in some southern and central portions at the close of the month. Few squares were reported in some southern counties. Corn planting was about completed at the end of the first week. The corn crop made good progress during the month and was in good to excellent condition at the close of the month. The weather was favorable for nearly all other crops most of the month. Strawberries were picked and shipped during the first two weeks. The harvesting of wheat and oats and the marketing of potatoes were in progress during the latter part of the month.

Several destructive storms and floods were reported in the northern and western portions of the State during May. Five tornadoes occurred during the month, taking two lives and injuring twenty, with property losses estimated at $46,600. High winds caused damage to property estimated at $1,300. Heavy rain and hail caused considerable losses, especially at Eureka Springs. Flood stages were reached at several stations on the upper Arkansas River and upper White River. Flood losses were estimated at $88,700 in the Arkansas Basin, and $42,100 in the White Basin.

O.D.N.

Three persons were killed by lightning in May. One man died of heat prostration in No. Little Rock on the 31st. Heavy rain damaged roads and bridges in Washington Co. on the 22d; damage estimated at $5,000. Heavy rain and heavy hail at Eureka Springs and vicinity on the 29th caused damage to property estimated as follows: Crop losses, $100,000; railroad property $400,000, and other property losses, $500,000. The heavy rain and hail the size of walnuts damaged crops, roofs, windows and automobile tops. It covered an area of 50 square miles. Many buildings were damaged by high water. Twelve railroad trestles and 6 miles of track of the Missouri and Arkansas railroad were washed out between Eureka Springs and Beaver.

Corrections for March, 1938.—DeQueen, greatest precipitation in 24 hours: 1.81 inches on 9th. Fayetteville, number of days 0.01 or more precipitation should be 13. Ozark, date of lowest temperature should be 7th. One boy killed by lightning on the 28th.

T less than 0.01 inch rain or melted snow. ††Not used in means and summaries Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. |||| 24 hours ending 7 a. m. *Included in next measurement.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Precipitation for May, 1938

ARKANSAS SECTION

H. S. COLE

VOL. XLIII LITTLE ROCK, ARK., JUNE, 1938 No. 6

PRICE: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The average temperature for June for the 66 stations was 75.8°, which is 1.4° lower than the average for the State for the past 48 years. The monthly means were below normal except at Bentonville, Camden, Fort Smith, Harrison, Hot Springs, Prescott and Thornburg where they were above. The greatest negative departures were —3.2° at Higden and Marked Tree. The greatest positive departure was +3.8° at Thornburg. Warm spells occurred from the 4th to the 7th, 14th to 17th and 20th to 26th. The highest temperatures occurred on the 15th, 16th, 23d or 24th at nearly all stations and were from 101° at Hot Springs on the 15th to 84° at White Rock. Lowest temperatures occurred on the 2d or 3d or near the end of the month and were from 63° at Little Rock and Monticello to 48° at Thornburg. The greatest daily range was 40° at Brinkley.

The average precipitation from the 98 stations reporting was 4.34 inches which is 0.29 of an inch more than the average for the past 48 years. The greatest monthly amount was 9.90 inches at Fulton, Springbank recording 9.68 inches, Index 8.50 and Okay 8.26 inches. The greatest 24-hour amount was 3.32 inches at Springbank on the 5th, Index reporting 3.00 inches on the 9th. The rains were local, but occurred at most stations on the 4th, 7th to 12th, 16th to 20th, and on the 26th and 27th, with showers over small areas at other times. The amounts were usually small except from the 7th to the 11th and from the 16th to the 19th. The rainfall was excessive at a number of stations and the number of rainy days was considerably greater than usual during the first 20 days. The soil was washed badly by the excessive rains. The rainfall was rather light during the last 10 days. An average of 9 rainy days was reported, 13 clear days, 9 partly cloudy days, and 8 cloudy days.

The soil was too dry in the southeastern portion at the beginning of the month for late cotton to get a start, but the rains that followed caused it to grow rapidly. From the 4th to the 20th the rains were so frequent and in some cases so heavy that cultivation was impossible but the light rainfall the last of the month was favorable for cultivation and the crop was in good to excellent condition at the end of the month. The weather was very favorable for corn and all other crops.

Rather high wind occurred at a few places on the 11th, 16th and 17th, but no damage was reported. Light dust was reported from one northwestern station.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLIII Little Rock, Ark., July, 1938 No. 7

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Temperatures averaged above normal for July while precipitation averaged about normal. The weather was hot the first two weeks of the month, especially in the southwestern portion of the State where maximum temperatures of 100° or more were recorded nearly every day. The latter half of the month was cooler and was marked by frequent showers.

The average temperature for the month based on the reports of 65 stations, was 82.0°, which is 1.5° above the 48-year average. The monthly means ranged from 85.1° at Hot Springs to 78.0° at Grannis. The highest temperature the month was 109° recorded at Hot Springs on the 13th. The lowest temperature for the month was 59° recorded at Grannis on the 4th and Lead Hill on the 15th, 16th, 21st and 24th. The greatest daily range was 42° at Bee Branch.

The average precipitation for the month, based on the reports of 98 stations, was 3.74 inches which is 0.06 inch below the 48-year average. Monthly totals ranged from 0.65 inch at Arkansas City to 12.90 inches at Corning. The greatest 24-hour amount was 5.64 inches recorded at Corning on the 31st. Rainfall during the first two weeks was very light, but frequent showers were recorded during the latter half of the month. During the rain period from the 16th to the 20th, heavy showers were reported at a number of stations throughout the State. On the 18th Corning reported 4.40 inches and on the 19th Hope reported 5.05 inches. From the 28th to the 31st rainfall was quite general over the State being heavy to excessive in the southwestern, south-central and northeastern counties. Corning reported a total of 8.27 inches for the last three days. The average number of days with 0.01 or more rainfall was 7.

Crops made good to excellent progress during the month due to the warm weather and timely showers. Cotton was in bloom and the warm weather caused rapid development of bolls. Some boll weevil activity was reported during the latter portion of the month. The corn crop was in good condition and the early corn was about matured in most sections near the close of the month. Rice made good progress and the early rice was heading in the southern portion of the belt. Early peaches, melons and cantaloupes were being shipped the first part of the month. The weather was favorable for meadows, pasture and all truck crops most of the month. O. D. N.

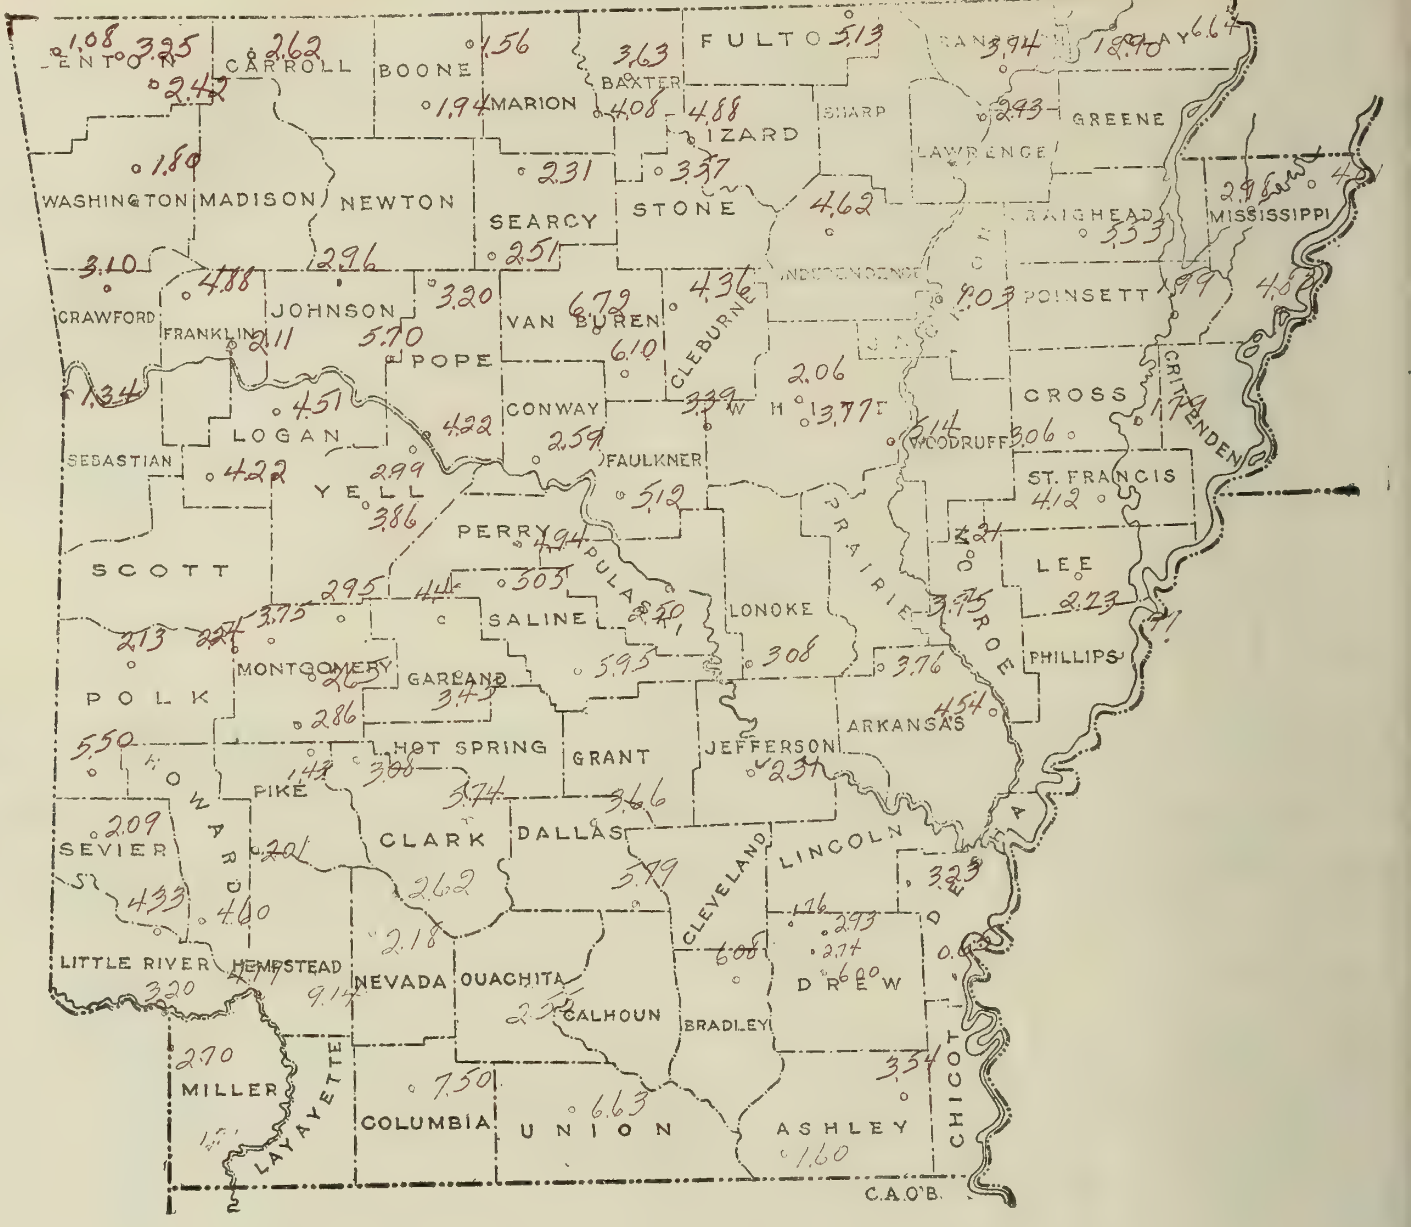
T less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ${}^{a}, {}^{b}, {}^{c}$, number of days missing. †Also on other dates. ‡‡P. O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||| 24 hours ending 7 a. m. *Included in next measurement.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Precipitation for July, 1938



Windstorm:—Monroe County, few miles south of Brinkley, 14th. Barn blown down and other farm buildings damaged. Estimated loss $1,000.

Killed by lightning:—Nevada County, near Bluff City, 13th. Farmer killed by lightning while plowing.

Heavy rains:—Clay County, the last few days of the month, did considerable damage to the cotton crop, and about 75% of the late corn crop was destroyed.

Vol. XLIII LITTLE ROCK, ARK., AUGUST, 1938 No. 8

PRICE: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

This month was the third warmest August in climatological ecords of Arkansas. The first half of the month averaged lightly above normal while the last half of the month averaged onsiderably above normal, especially in the southern and eastrn portions of the State. The average temperature for the tate, based on the reports of 69 stations, was 83.2° which is .1° above the 48-year average. Monthly means ranged from 9.6° at Devils Knob and White Rock to 86.0° at Hot Springs. he highest temperature reported was 109° at Conway on the 4th, 25th and 26th, and at Hot Springs on the 26th. The owest temperature was 54° at Gilbert on the 25th.

Scattered showers were reported during the first 17 days. he following 10 days were hot and dry with no precipitation nywhere in the State. Light scattered showers relieved the rought in some places at the close of the month. The average recipitation for the 100 stations reporting was 2.26 inches hich is 1.29 inches below the 48-year average. The rainfall istribution for the month was rather uneven, ranging from onthly totals of less than an inch at eleven stations to slighty more than 5 inches at two stations in the extreme southastern portion of the State. The greatest amount measured any 24-hour period was 2.93 inches at Fort Smith on the 6th. The average number of days with 0.01 or more rainfall as 5.

Cotton made fairly good to very good progress during the onth. The first part of the month was favorable for boll eevil activity and considerable damage was done in some calities. Leaf and army worms also were quite active during his period and spread over most of the State. The hot, dry eather the latter half of the month checked the weevil and orm activity considerably. Cotton stopped blooming due to e hot weather and it was reported that the foliage turned rown from the heat in many localities. Cotton bolls opened pidly the latter part of the month, and much picking was one. Other crops made good to very good progress the first o weeks but suffered from the drought the latter part of the onth. At the close of the month early rice was being harested in the southern portion of the belt and the crop was aturing rapidly in the northern portion. The month had an verage of 18 clear, 9 partly cloudy and 4 cloudy days.

O. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, **Texarkana**; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover: White Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||| 24 hours ending 7 a. m. *Included in next measurement.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period to 1935, inclusive.

Precipitation for August, 1938

ARKANSAS SECTION

H. S. COLE

Vol. XLIII Little Rock, Ark., September, 1938 No. 9

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The average temperature for the month of September was above normal while the average precipitation was considerably below normal. The rainfall was 46% of the 48-year average.

Temperatures were high the first half and the last week of the month. The average temperature for the State, based on the reports of 67 stations, was 75.7° which is 1.3° above the 48-year average. Monthly means ranged from 79.0° at Texarkana to 70.4° at Devils Knob. The highest temperature reported during the month was 107° at Conway and Texarkana on the 1st. The lowest temperature was 32° at Thornburg on the 20th. The greatest daily range was 54° at Thornburg on the 30th.

Scattered showers occurred during the first two weeks of the month, and one or two showers in the southern and eastern portions of the State during the last week. The average precipitation for the 100 stations reporting was 1.55 inches which is 1.82 inches below the 48-year average. The monthly totals ranged from 0.11 inch at Calico Rock in Izard County to 4.32 inches at St. Charles in Arkansas County. Thirty stations reported monthly totals of less than one inch, eleven of this number were in the northeastern portion of the State. The greatest amount measured in any 24-hour period was 3.16 inches at St. Charles on the 26th. The average number of days with 0.01 inch or more rainfall was 4.

Cotton made good to very good progress during the month. Picking progressed very rapidly in all portions and was nearly completed in the hills and adjoining sections, and well along in the eastern lowlands at the close of the month. The weather was favorable for gathering early corn, but the soil was too dry for late corn. It was also favorable for harvesting and threshing rice and for gathering feed and food crops, but the soil was too dry for meadows and pastures most of the month. Light frost was reported at a few stations in the western and northwestern sections of the State on the 19th or 20th but it did very little damage.

An earthquake was felt over most of the State, except the extreme southwestern portion, from 9:30 p. m. to 9:36 p. m. on the 16th. It was felt most in the central and east-central sections of the State, and stations in these areas reported very slight damage. Auroras were observed at Eureka Springs on the 13th; at Harrison, Mountain Home and Subiaco on the 27th; and at Mountainburg on the 28th, 29th and 30th.

Farm home near Subiaco destroyed by lightning on the 5th. Estimated loss $2500.

Hail and wind damaged cotton over a small area in eastern Monroe County on September 1st. No estimate of damage.

O.D.N.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipita-on with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for ie period to 1935, inclusive.

Precipitation for September, 1938

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLIII Little Rock, Ark., October, 1938 No. 10

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

This month was the third warmest October in climatological records of Arkansas. The first twenty days were warm, the first few days of the month being exceedingly warm with a record of 105° on the first. A cold period occurred from the 21st to the 25th with sub-freezing temperatures at many stations. Killing frost was reported at most stations on the 24th. The average temperature for the State, based on the reports of 59 stations, was 66.8°, which is 4.2° above the 48-year average. Monthly means ranged from 71.3° at Texarkana to 61.6° at Lead Hill. The highest temperature reported was 105° at Grannis and Okay on the 1st. The lowest temperature was 20° at Mount Ida on the 24th. The greatest daily range was 60° at Gravette on the 25th.

The drought that began the middle of September continued until the middle of October at most stations. The average precipitation for the month for 107 stations was 0.94 inch, which is 2.22 inches below the 48-year average. 71 stations reported monthly amounts of less than an inch and 32 stations less than 0.50 inch. The monthly totals ranged from 0.07 inch at Russellville in Pope County to 4.12 inches at Higden in Cleburne County. Positive departures were reported at only two stations: Higden and Searcy. The greatest amount measured in any 24-hour period was 3.09 inches at Higden on the 19th. The average number of days with 0.01 or more rainfall was 3.

The dry, warm weather the first part of the month was ideal for cotton, and excellent progress was made in picking and ginning. At the close of the month some cotton still remained in fields in the northeastern and east-central portions, but picking was about completed elsewhere. The weather was favorable for gathering early corn but too dry for late corn. It was also favorable for gathering other fall crops, but unfavorable for meadows, pastures, and for planting and growth of winter grains and truck. Wells, springs and small streams in the western portion of the State were nearly dry.

O.D.N.

Corrections for evaporation tables, 1938.--Hope, April monthly evaporation 4.955. May 8th, −0.009; monthly evaporation 7.924. July 6th 0.349; 29th 0.269; monthly evaporation 7.664. Russellville, February 14th, 0.110; monthly evaporation 2.286. Stuttgart, January monthly evaporation 1.491.

Corrections for evaporation tables, 1937.--Hope, February monthly evaporation 2.698. March monthly evaporation 4.221. October 18th and 19th evaporation should be blanked 31st, .170; monthly evaporation 4.809. December monthly evaporation 1.614. Russellville, December 20th, 0.010; 23d, 0.114; monthly evaporation 1.109. Stuttgart, October 3d, −0.029; monthly evaporation 2.787.

Corrections, September, 1938:--Benton, delete maximum temperature of 74° on 19th; move maximum readings 20th to 30th up one day; add 95° on 30th. Mean maximum 91.5°; mean temperature 75 0°; greatest daily range 49°. Morrilton, delete maximum temperature on 1st; move maximum readings up one day and add 94° on 30th. Mean maximum 93.8°; mean temperature 77.6°; departure from normal +2.6; date of highest temperature 1st. Danville, total rainfall 2.87 inches; departure −0.52.

T. less than 0.01 inch rain or melted snow. ††Not used in means and summaries. Reference letters ^{a},^{b},^{c}, number of days missing. †Also on other dates. ‡‡P. addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkan Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; Whi Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ||| 24 hours ending 7 a. m. *Included in ne measurement. Italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipit tion with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are the period to 1935, inclusive.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLIII Little Rock, Ark., November, 1938 No. 11

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The average temperature for the month, based on the reports of 71 stations, was 50.7°, which is 0.7° below the 48-year average. Monthly means ranged from 55.2° at El Dorado in Union County to 44.1° at Gilbert in Searcy County. The highest temperatures occurred at most stations during the first few days of the month, the highest recorded being 89° at Lutherville on the 2d. The lowest temperatures occurred during the last week of the month, the lowest being 8° at Lead Hill on the 27th. The greatest daily range was 60° at Okay on the 25th.

The average precipitation for the month, based on the reports of 107 stations, was 5.26 inches, which is 1.51 inches above the 48-year average. Rainfall was well distributed throughout the month with heavy amounts reported at many stations on the 3d, 4th, 7th and 18th. Precipitation was above normal over the western half of the State, and a portion of the northeastern section. The monthly amounts ranged from 1.30 inches at Wilson in Mississippi County to 9.60 inches at Magnolia in Columbia County. The greatest amount recorded in any 24-hour period was 5.60 inches at Magnolia on the 7th. The average snowfall for the month was 0.1 inch recorded on the 24th and 26th, all of which fell in western and northern counties. The average number of days with 0.01 precipitation was 5.

Cotton picking was about completed this month with the exception of a few fields in the northeastern and some central portions. The cold spell the last week of the month stopped growth of vegetation and also halted work in the fields for several days. The weather was favorable most of the month for such work as butchering, cutting wood, cleaning fields and orchards, and repairing fences and buildings. It was also favorable for winter grains, pastures and winter truck. The average number of clear days was 16, partly cloudy 6, and cloudy 8.

O.D.N.

Storms

Tornado:--17th, p. m., Elkhorn community, 7 miles ne of Rogers in Benton Co., storm moved eastward, path 1-2 mile wide and about 5 mi. long, three homes damaged and many trees uprooted. No report of anyone injured. Estimated loss $500.

High Winds:--17th, p. m., Centerton in Benton Co., property damaged. Estimated loss $200. 25th, a. m., Pangburn and vicinity in White Co., one person injured, farm buildings damaged. Estimated loss $500.

Corrections

Climatological Data, May, 1938.---Crossett, date of lowest 9th; Hot Springs, date of highest 30†.

Climatological data, June 1938:---Amity, clear days 5°, partly cloudy 16°, cloudy 4°. Benton, date of highest 15†. Calico Rock, clear days 16ª, partly cloudy 0ª, cloudy 13ª. De Queen, date of lowest 2†. Searcy, greatest daily range 34.

Climatological Data, August, 1938:---Brinkley, date of minimum temperature, 15th; Conway, date of minimum, 17th†; Crossett, number of days with .01 inch or more, 4; England, minimum temperature 67° on the 17th, Magnolia, mean minimum temperature 71.4°.

(addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkan Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Doddridge; Turnpike, Dover; Whi Rock, Cass. Precipitation for 24 hours ending near sunset unless otherwise indicated. ***24 hours ending midnight. ‖‖ 24 hours ending 7 a. m. *Included in ne measurement. Italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipit tion with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are f the period to 1935, inclusive.

ARKANSAS SECTION

H. S. COLE

OL. XLIII Little Rock, Ark., December, 1938 No. 12

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

Temperatures averaged above normal over most of the State xcept in the following counties: Ashley, Baxter, Boone, Hemp- ead, Monroe and Poinsett. The average temperature for the ionth, based on the reports of 70 stations, was 43.6°, which 0.9° above the 48-year average. Monthly means ranged from 8.4° at Lead Hill in Boone County to 49.0° at Magnolia in olumbia County. The highest temperatures occurred during ie first eleven days of the month, the highest recorded being 2° at Arkadelphia on the 1st, 2d, and 10th. The lowest mperatures were reported during the last week of the month, ie lowest being 6° at White Rock on the 27th. The greatest aily range was 54° at Arkadelphia on the 10th.

Precipitation for the month was 69% of the average, and was elow normal over most of the State except at the following ations: Index, Lutherville, and Prescott. The average Precipi- ation for the month, based on the reports of 105 stations, was .93 inches, which is 1.33 inches below the 48-year average. 'his was the dryest December since 1930. Monthly amounts anged from 0.66 inch at Fayetteville to 6.11 inches at Lutherille. Heavy rains were reported at many stations on the 3d nd 23d, and frequent showers over the State the latter part of ie month. The greatest amount of rainfall reported for any 4-hour period was 4.60 inches, at Lutherville on the 3d. The verage snowfall for the month was a Trace. The average umber of days with .01 inch or more precipitation was 7.

The weather was favorable for farm activity the first part of ie month, but the work was somewhat retarded by the wet nd cold weather the latter portion. Winter grains, pastures, nd winter truck were in good condition at the end of the month.

The rivers in the State were at low stages all month.

O.D.N.

Corrections

Boughton, total precipitation on page 69 should be 4.66 inches. Stuttgart Evaporation November 30, accumulation for 7 days should be .319; Monthly evaporation 2.474. December 1, should be .046; Monthly evaporation 1.743.

Italics interpolated.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipitation with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are f the period to 1935, inclusive.

CLIMATOLOGICAL DATA

ARKANSAS SECTION

H. S. COLE

Vol. XLIV — Little Rock, Ark., Year, 1938 — No. 13

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The weather in Arkansas during the year 1938 was considerably above normal in temperature and about normal in precipitation.

The average temperature for the year was 63.6°, which is 2.4° above the 48-year average. June and November were the only months with negative departures. This was the warmest year since 1921 when the average was 64.2°. The highest temperature for the year was 109° in Garland County in July and in Garland and Faulkner counties in August. The lowest temperature was 4°, recorded in Franklin County in January.

The average precipitation for the year was 48.25 inches, which is 0.04 inch above the 48-year average. The first four months and June and November had positive departures. Monthly averages ranged from 6.48 inches in January to 0.94 inch in October. The average number of rainy days was 81. The heavy to excessive rain periods occurred during the first half of the year and caused many floods. Flood losses in the Arkansas Basin were estimated at $369,200; in the White Basin $167,600; the Ouachita Basin $39,700, and the Red and Little River Basins $160,900.

Twenty tornadoes were reported during the year: 14 in March, 5 in May and one in November. Twenty lives were lost, and property losses were estimated at $413,100.

One of the most damaging storms during the year was reported at Eureka Springs and vicinity on May 29th when a heavy rain and hail storm damaged or destroyed property valued at $1,000,000.

The growing season ranged from 197 days at most northern stations to 269 days at Pine Bluff. The rainy days were slightly above normal the first part of the growing season; below the latter part. Drought conditions prevailed the last two weeks in August and from the middle of September to the middle of October. Vegetation was seriously effected by the drought.

The year had an average of 176 clear, 95 partly cloudy and 94 cloudy days.

FLOODS IN 1938

Excessive rains from January 20th to 25th caused floods in the Red, Little Missouri, Ouachita, Petit Jean and St. Francis rivers. In the Red and Little River Basins ten to twenty thousand acres of farm land were inundated and about 200 tenant families were forced to leave their homes. The Red River at Fulton crested at 32.9 feet on January 28th. A considerable area was inundated in the Ouachita Basin. The crest at Boughton, on the Little Missouri was 22.9 feet on January 25th. On the Ouachita, Arkadelphia had 26.0 feet on the 23d and Camden, 40.7 feet on the 27th. The Petit Jean River was high, Danville had 27.1 feet on the 25th. On the White River, the crest at Batesville was 23.3 feet on the 25th; Newport, 22.5 feet on the 27th; Georgetown, 22.3 feet on February 2d; and Clarendon had 27.7 feet on February 7th. The Cache bottoms were flooded and about 150 families were forced to evacuate. The crest at St. Francis, on the St. Francis River was 19.9 feet on February 1st.

The heavy to excessive rains from February 14th to 22d caused floods on practically all streams in the State. Red Cross officials estimated that 500,000 to 600,000 acres had been flooded in 21 counties and forced 24,000 refugees to leave their homes. Crest reports on the Arkansas River were as follows: Fort Smith, 33.2 feet on February 19th; Dardanelle, 29.6 feet on the 19th: Morrilton, 27.8 feet on the 21st; Little Rock 26.2 on the 22d; and Pine Bluff, 31.7 on the 23d. On the Petit Jean the crest at Danville was 29.3 feet on the 18th. In the Ouachita Basin the crest stages were as follows: Arkadelphia, 29.0 feet on the 19th, and Camden, 41.1 on the 22d. Boughton on the Little Missouri had 23.6 on the 19th. In the Red River Basin the crest at Fulton was 36.4 feet on the 24th. On the White the crest stages were as follows: Calico Rock, 42.0 feet on the 18th, midnight; Batesville, 39.5 on the 19th; Newport, 33.4 on the 20th; Georgetown, 31.5 on the 23d; Clarendon, 35.0 on the 28th; and St. Charles, 31.8 on March 3d The crest at St. Francis on the St. Francis River was 23.5 fee on February 24th. Two breaks in the levee near Bertig on th St. Francis River during this period flooded about 1000 acre of cultivated land.

Heavy rains from March 26th to 31st caused floods or nea floods on the Arkansas, White, Ouachita, Red and St. Franci rivers and their tributaries, from March 29th to April 6th. O the Arkansas, Fort Smith reported 25.1 feet on March 31st Dardanelle, 22.8 on April 1st. On the White, Batesville ha 31.0 feet on March 31st; Newport, 29.5 April 2d; Georgetown 25.8 April 6th and Clarendon, 30.6 on April 11th. On th Ouachita, Camden had 40.1 feet on April 5th. On the Re River, Fulton reported 31.4 feet on April 4th.

Heavy rains from April 6th to 9th and from April 15th t 17th kept rivers at high stages most of the month with floo stages on several rivers.

Frequent rains in May caused flood conditions in the Arkan sas and White Basins the latter portion of the month. On th Arkansas, Fort Smith had 25.0 feet on May 25th and Darda nelle, 22.8 on the 26th. On the White River, Calico Rock ha 24.4 feet on the 24th; Batesville, 29.0 on the 24th midnight Newport, 25.9 on the 27th; Georgetown, 22.7 on June 1st and Clarendon, 27.0 on June 7th-9th.

Frequent rains in June kept the Arkansas and White river moderately high most of the month.

Final estimates on flood losses for the year are as follows:

Arkansas Basin	$369,200
White Basin	167,600
Ouachita Basin	39,700
Red and Little River	163,857
St. Francis River	1,000

Departures from normal temperature are computed from averages of entire period for stations having 10 or more years record. Departures of precipitation with 15 ears or more record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are for the period o 1935, inclusive. T., less than 0.01 inch rain or melted snow. Reference letters ^{a}, ^{b}, ^{c}, appearing in the table indicate number of days missing: † Also on later ates. **Also later months. ‡‡Post-office addresses of these stations as follows:-Alum Fork Reservoir, Reform; Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; evils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rose–ud, Route 2, Mount Vernon; Springbank, Doddridge; Turnpike, Dover; White Rock, Cass; Hankins, Montongo, Plantersville, Ross and Underwood, Soil Conservation Service, onticello.

H. S. COLE

VOL. XLIV LITTLE ROCK, ARK., JANUARY, 1939 No. 1

PRICE: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The temperature for January averaged above normal over the entire State. The mean temperature for the month, based on the reports of 72 stations, was 45.5°, which is 4.1° above the 49-year average. Monthly means ranged from 50.6° at Magnolia in Columbia County to 40.6° at Devils Knob in Johnson County. The highest temperature for the month was 83°, recorded at Arkadelphia on the 7th and 8th, while the lowest was 12°, recorded at Grannis on the 16th. The greatest range was 53° at Arkadelphia on the 7th.

The average precipitation for the 107 stations reporting was 6.21 inches, which is 1.74 inches above the 49-year average. The rainfall was frequent throughout the State during the month. Monthly amounts ranged from 1.78 inches at Waldron and 1.97 inches at Fort Smith to 12.01 inches at Portland in Ashley County. Amounts ranging from 10 to 12 inches were reported in Arkansas, Desha, Drew and Phillips counties. The number of rainy days averaged ten. Sleet and snow were reported on the 23d at most stations in the northern half of the State, and snow on the 30th in the northwestern portion. The average snowfall for the month was 0.5 inch.

Little farm work was done in the eastern and southeastern counties because the soil was too wet from frequent heavy rains; elsewhere the work progressed normally. Temperatures were too high for fruit the first nine days of the month and from the 19th to the 21st, but low temperatures during the rest of the month checked development of buds. Winter crops were in good to excellent condition except in some western portions where stands are poor.

Low river stages were general at the beginning of the month, and most streams were affected very little by the rainfall during the month, with the exception of the upper White. High stages were reported on the upper White on the 31st as follows: Black Rock, 16.6 feet; Batesville, 21.4 feet, and Judsonia, 28.0 feet.

O.D.N.

High Winds

January 4th, Farmington and vicinity in Benton County. Damage to property estimated at $1000.

Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of vation. [1]First-order Weather Bureau Station; precipitation is for the 24-hour period, midnight to midnight. [2]Precipitation is measured in the morning; amount recorded is for the preceding 24 hours. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less th inch. †Post office addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Ro Texarkana; Lutherville, Route 1, Lamar; Rock Springs, Route 2, Wilmar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Dodridge; Turnpike, White Rock, Cass. ††Not used in meansand summaries. Reference letters [a],[b],[c], number of days missing. ‡‡Also on other dates.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of pre tion with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means the period to 1935, inclusive.

oL. XLIV   Little Rock, Ark., February, 1939   No. 2

Price: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The mean temperature for the month, based on the reports f 71 stations, was 43.6°, which equals the 49-year average. onthly means ranged from 36.2° at Gravette to 50.2° at ortland. The highest temperature during the month was 76° eported at four stations: Camden, Crossett, Magnolia and onticello. The lowest temperature was 4° recorded at Mam- oth Spring on the 4th. The greatest daily range was 50° at hite Rock on the 10th.

The average precipitation for the 108 stations reporting was .56 inches, which is 5.13 inches above the 49-year average. his was the wettest February on record. The average num- er of days with 0.01 inch or more was 12. The monthly mounts ranged from 4.21 inches at Rogers to 16.69 inches at ine Bluff. Five stations reported monthly amounts in excess f 12 inches. They were Camden, Highland, Pine Bluff, St. harles and Stuttgart. The greatest amount for any 24-hour eriod was 5.32 inches reported at Pine Bluff on the 15th. nowfall was reported on the 2d and 3d over the northern half nd southwestern portion, and at a few northern stations on e 14th, 21st and 25th. Heavy amounts were recorded at orthern stations on the 2d and 3d. The average snowfall for e month was 3.2 inches.

Very little farm work was accomplished during the month ue to the frequent rains. The weather was favorable for the rowth of wheat, oats, meadows, pastures and winter truck in e western and northern portions. The heavy rains in the outhern and eastern portions kept the soil saturated all month nd little or no farm work was done. The low temperatures arly in the month did but little damage to truck crops and ere favorable for fruit.

Floods were reported on many rivers in the State as a result f the heavy to excessive rainfall. Flood stages were reported n the Black, the Little Red, the lower White, the Ouachita nd the Petit Jean rivers. Flood losses were reported as fol- ows: On the Ouachita, $16,500; on the Petit Jean, $450.

Except as otherwise indicated, observations are generally made late in the afternoon, near sunset, and precipitation recorded is for the 24 hours ending at time of obser vation. ¹First-order Weather Bureau Station; precipitation is for the 24-hour period, midnight to midnight. ²Precipitation is measured in the morning; amount ther recorded is for the preceding 24 hours. ‡Precipitation measured with recording gage. *Included in the next measurement. T. Trace, or precipitation less than .0 inch. †Post office addresses as follows:—Big Lake Outlet, Manilla; Boughton, Route 4, Prescott; Devils Knob, Salus; Green Mountain, Calico Rock; Index, Route 5, Texarkana; Lutherville, Route 1, Lamar; Rogers, Route 3, Rogers; Rosebud, Route 2, Mt. Vernon; Springbank, Dodridge; Turnpike, Dover; White Rock, Cass; Hankins Montongo, Plantersville, Ross and Underwood, Soil Conservation Service, Monticello. ††Not used in means and summaries. Reference letters ᵃ,ᵇ,ᶜ, number of days miss ing. ‡‡Also on other dates.

The departures from the normal temperature are computed from the averages of the entire period for stations having 10 or more years of record. Departures of precipita tion with 15 years or more of record are computed from a normal or "standard mean", adjusted to a uniform 35-year period; for stations with 10 to 14 years the means are fo the period to 1935, inclusive.

ARKANSAS SECTION

H. S. COLE

VOL. XLIV   LITTLE ROCK, ARK., MARCH, 1939   No. 3

PRICE: 25 Cents per year (not stamps). Remit to Superintendent of Documents, Washington, D. C.

GENERAL SUMMARY

The mean temperature for March, based on the reports of 72 stations, was 55.4°, which is 2.7° above the 49-year average. Monthly means ranged from 49.6° at Lead Hill to 60.2° at El Dorado and Magnolia. The highest temperature reported was 88° recorded at Corning, Dumas and Ozark on the 23d. The lowest recorded was 19° at Lead Hill on the 16th. The greatest daily range was 54° reported at Gravette on the 19th.

The average precipitation, for 109 stations, was 3.71 inches, which is 1.00 inch below the 49-year average. Monthly amounts ranged from 1.24 inches at Fort Smith to 7.65 inches at Arkansas City. Precipitation was above normal over the region from the Red River Basin eastward to Desha and Chicot counties, and over a narrow belt extending from eastern Johnson County northeastward to Fulton County. Moderate to heavy rains were reported on the 4th-5th, the 10th and from the 25th to the 29th. The greatest amount recorded in any 24-hour period was 4.31 inches at Arkansas City on the 30th. The average number of days with 0.01 inch or more was 8. The average snowfall for the month was a trace.

Dust was reported at a number of stations on the 5th, 11th and 12th. The visibility was reduced to 2 miles in the central part of the State on the 5th.
